

## Safety notice

### Construction and pedestrian safety

During the construction of the Ipswich Motorway Upgrade between Wacol to Darra there will be a number of changes to how pedestrians and cyclists get in and around the area.

SAFElink is committed to making sure that everyone who interacts with the project does so safely. This includes construction contractors as well as motorists, cyclists, pedestrians, and children walking to and from local areas.

SAFElink cares about your safety. Please take a moment and review these construction safety tips:

- always walk on the sidewalk or designated walkway
- use designated crosswalks at all times - crossing of the motorway is prohibited and can increase the likelihood of an accident
- if there are no crosswalks, signs or signals, pedestrians should yield to all vehicles
- pay close attention to all posted signs - this will reduce the possibility of an incident
- avoid going near a construction zone whenever possible
- never enter a construction site - heavy machinery and debris can be hazardous
- construction vehicles move quickly and suddenly - maintain a safe distance and always be prepared for sudden stops and wide turns
- avoid using a cellular phone when near a construction zone - staying alert to your surroundings reduces the likelihood of an incident
- be cautious walking along driveways, often motorists do not expect or anticipate pedestrians in these areas
- always look both ways and over your shoulder for turning cars before crossing the street
- always use extreme caution, and
- do not enter the roadway from between parked cars or behind shrubs or bushes.

Should you require any further information regarding the project, please contact SAFElink Alliance on freecall 1800 605 410.
