Declaration of Accuracy

In making this declaration, I am aware that sections 490 and 491 of the Environment Protection and Biodiversity Conservation Act 1999 (Cth) (EPBC Act) make it an offence in certain circumstances to knowingly provide false or misleading information or documents. The offence is punishable on conviction by imprisonment or a fine, or both. I declare that all the information and documentation supporting this compliance report is true and correct in every particular. I am authorised to bind the approval holder to this declaration and that I have no knowledge of that authorisation being revoked at the time of making this declaration.

Signed

1. Introduction

The Bruce Highway Cooroy to Curra Section C (Traveston to Woondum) Project (herein referred to as ‘the Project’) undertaken by the Department of Transport and Main Roads (TMR) was subject to approval under Environment Protection and Biodiversity Conservation Act 1999 (EPBC Act).

The EPBC Act referral for the Project was submitted to the former federal Department of the Environment (DoE) (now Department of Environment and Energy (DEE)) for impacts to matters of national environmental significance (MNES) on the 3 December 2014. A decision on the assessment of the referral was delivered by the DoE on 7 January 2015 which determined the Project (the proposed action) to be a ‘controlled action’ due to the likelihood of significant impacts to MNES protected under Section 18 and 18A, Part 3 of the EPBC Act. Sections 18 and 18A relate to actions with significant impact on listed threatened species. The determination required the proposed action to be assessed by the submission of preliminary documentation. Approval for the Project with conditions was granted on 24 December 2015 (approval number EPBC 2014/7394).

Condition 12 of the approval requires that TMR prepares and publishes an annual report that demonstrates compliance with each of the conditions of the approval. This Compliance Report is prepared for the period from December 2017 to December 2018.

2. Description of Activity

2.1 Project location

The Project is located south of the city of Gympie. It is the third section of a 61 km upgrade of the Bruce Highway between the townships of Cooroy and Curra to be constructed. The Project joins the completed Section B: Federal to Traveston in the south at the existing Traveston interchange and the yet to be constructed Section D: Woondum to Curra, in the north (refer to Figure 1).

2.2 Description of the Project

Key elements of the Section C Project include the following:

- Northbound and southbound ramps connecting from the proposed alignment to the existing roundabouts at the Traveston Road Interchange.
- 8.8 km’s of four lane formation to accommodate four lanes of pavement and associated earthworks from Traveston Road Interchange to the proposed Woondum Road overpass with allowance for a future six-lane formation.
- 1.7 km’s of upgrade of the existing Bruce Highway to the southern approach of the existing Six Mile Creek Bridge.
- Partial realignment and reconstruction of Woondum and Tandur Roads to accommodate the newly formed Bruce Highway.
- Grade separation at Tandur and Woondum Roads, with the highway bridging over the local roads.
- Three span bridge over Traveston Creek requiring realignment of 142 m of Traveston Creek.
- Two span bridge over Kybong Creek requiring the realignment of 173 m of Kybong Creek.
- Three span bridge over Cobbs Gully requiring realignment of 163.4m of Cobbs Gully.
- Three span bridge over Jackass Creek requiring realignment of 119m of Jackass Creek.
Figure 1   Plan of Cooroy to Curra Project
2.3 Matters of national environmental significance

The Project was assessed as having the potential to have a significant impact on the following MNES:

- Koala (*Phascolarctos cinereus*)
- Grey-headed flying-fox (*Pteropus poliocephalus*)
- Mary River cod (*Maccullochella mariensis*)
- Mary River turtle (*Elusor macrurus*)
- White-throated snapping turtle (*Elseya albagula*)

Following the commencement of construction a wallum sedge frog (*Litoria olonburensis*) was identified during a survey in a dam on site. An exclusion zone and temporary frog fencing was installed around the dam whilst consultation with state and federal regulators was undertaken. Approval was granted by DoE to proceed with the works, in accordance with the Species Management Program prepared for the Project.

2.4 Project progress

The newly constructed highway was opened to traffic in early November 2017 and all construction activities were completed in mid-February 2018. Refer to Figure 2 and Figure 3 for images of the completed highway.

3 Compliance with Approval Conditions

Table 1 provides details of the compliance with the Project’s EPBC Act approval conditions.

Table 1 Compliance with EPBC Approval

<table>
<thead>
<tr>
<th>Condition number</th>
<th>Condition</th>
<th>Is the Project compliant with this condition?</th>
<th>Evidence/ comments</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>The approval holder must not clear more than 45.9 hectares of habitat for Matters of National Environmental Significance located inside the Project area.</td>
<td>Compliant</td>
<td>As documented in the 2017 Compliance Report 35.30 ha of koala habitat was cleared for the Project. No further vegetation clearing was required to complete the construction phase.</td>
</tr>
<tr>
<td>2</td>
<td>To prevent impacts to water quality the approval holder must ensure that during normal flow events:</td>
<td>-</td>
<td>-</td>
</tr>
<tr>
<td>2 (a)</td>
<td>Water quality monitoring is conducted in accordance with the Erosion and Sedimentation Control specifications, including the location of water sampling points, weekly for the duration of construction, and quarterly for five (5) years after the completion of construction;</td>
<td>Compliant</td>
<td>Water quality monitoring was conducted during construction on a weekly basis and following rain events greater than 10mm. The construction contractor recorded all results of the monitoring. Following the completion of the construction phase water quality monitoring has been undertaken quarterly on the following dates: - 15 March 2018 - 18 June 2018 - 27 September 2018 - 18 December 2018</td>
</tr>
<tr>
<td>2 (b)</td>
<td>There must be no construction related impacts to water quality between upstream and downstream water sampling points during construction and for five (5) years after the completion of construction</td>
<td>Compliant</td>
<td>There have been no construction or operational related impacts to water quality during the reporting period.</td>
</tr>
<tr>
<td>2 (c)</td>
<td>During construction any water released from sediment basins must not contain less than 50% dissolved oxygen.</td>
<td>Compliant</td>
<td>Water released from sediment basins during the construction phase contained more than 50% dissolved oxygen. All temporary sediment basins have now been decommissioned and there is nothing further to report for this condition.</td>
</tr>
<tr>
<td>3</td>
<td>During construction there must be no koala or grey-headed flying-fox mortality attributable to construction activities within the Project area, monitored daily.</td>
<td>Compliant</td>
<td>There have been no koala or grey-headed flying-fox mortalities attributable to construction activities within the Project area. The construction contractor undertook daily observations on site which included details of any interactions with fauna. The construction phase was completed in February 2018 and in this regard there is nothing further to report for this condition.</td>
</tr>
</tbody>
</table>
For the ongoing protection of the koala, the approval holder must implement protection measures including fencing and passages that must be designed, placed, maintained and actively monitored (at least monthly), to ensure that no koala mortality from vehicle strike occurs within the Project area and that the ability for koalas to cross safely is maintained where the road passes through Traveston State Forest, for the life of the approval.

Compliant

The construction of the koala fence and fauna underpasses is complete. Ongoing monthly monitoring of the fence and fauna underpasses is being undertaken. Maintenance is being completed as required and to date includes the following:

- Weed spray
- Grass cutting, brush cutting
- Fence repairs following storm damage
- Placement of rock fill in minor rills following storm events
- Placement or rock in erosion prone areas.

A koala fatality occurred on the highway north of Traveston Creek and was reported to TMR by a local council officer on 10th September 2018. A site inspection identified that all gates were closed, the koala fence was intact and the drain protection measure was installed. It is not known how the koala accessed the highway at this location which comprises relatively cleared agricultural land. From discussions with the local council officer and a member of the koala action group it was determined that the animal may have walked round the end of the koala fence to the north of the site where it was found. The incident was reported to DEE on 12 September 2018 and no further action was required.

If monitoring results indicate that outcomes in conditions 2-4 have not been achieved or are not likely to be achieved, the approval holder must:

Not-applicable

investigate why the outcomes will not be achieved and determine if it is a result of the action, failure to maintain fencing and passages, or other circumstances;

Not-applicable

where caused by the action, or failure to maintain fencing and passages, advise the Department within 14 days of receiving the monitoring results; and

Not-applicable

develop and implement corrective actions, revised management measures and/or compensation measures in consultation with a suitably qualified expert and the Department.

Not-applicable

To compensate for residual significant impacts to the koala, the approval holder must provide a financial contribution of $663,000 over a five-year timeframe for research that will contribute to the better protection and long term conservation of the koala. The research must include, but is not limited to:

Compliant

The koala research project is in progress. A progressive payment structure has been implemented.

<tbody>
<tr>
<td>6 (a)</td>
<td>provision of $550 000 for a research program that will: measure the long-term effects of habitat fragmentation on koala health dynamics and how these may be mitigated by the introduction of corridors.</td>
<td>Compliant</td>
<td>The research project is in progress. Surveys have been undertaken of all accessible sites in the Gympie and Tinana areas. Genetic genotyping of scat samples is in progress and the data is being analysed.</td>
</tr>
<tr>
<td>6 (b)</td>
<td>provision of $88 000 for the training of koala detection dogs to be used in the study.</td>
<td>Compliant</td>
<td>The koala scat detection dog, Baxter and fresh scat detection Dog, Billie, have continued to work in the field with qualified dog handlers (refer Figure 4).</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Not-applicable</td>
<td>To date there are no results of the data analysis to publish. Two research papers with regard to survey methodology and genotyping have been published from findings from a number of projects including the Section C research project:</td>
</tr>
<tr>
<td>7</td>
<td>The approval holder must submit to the Department for the approval of the Minister, a research proposal detailing how condition 6 will be achieved, within 3 months of the date of the approval decision. The research proposal must address how the research proposal complies with Appendix A of the EPBC Act Environmental Offsets Policy and must include clear timeframes in which the financial contributions described in condition 6 will be paid.</td>
<td>Compliant</td>
<td>A research proposal was submitted to DoE on 19 February 2016 and was approved by the Minister on 27 March 2016.</td>
</tr>
</tbody>
</table>
8. For the protection of the koala, the approval holder must provide $25,000 to the Gympie Regional Council to be used for the management of feral dogs within the council area within three (3) months of the date of this approval decision. Within ten (10) business days of provision of the funds the approval holder must advise the Department in writing that this has occurred. Compliant The funding has been provided and the program of work has been completed by Gympie Regional Council.

9. In the event that the research proposal referred to in condition 7 is not submitted within 12 months of the approval date, and approved; or the approved research program is not delivered to the satisfaction of the Minister within five (5) years of entering into the research program set out in condition 6, the approval holder must secure an appropriate direct offset to compensate for the loss of 45.9ha of habitat critical to the survival of the koala, in accordance with the Department's EPBC Act Offsets Policy and to be secured by a legally binding conservation protection mechanism. Not applicable

10. Within 10 days after the commencement of the action, the approval holder must advise the Department in writing of the actual date of commencement of the action. Compliant Notification was provided to DoE on the day the action commenced, 1 February 2016.

11. The approval holder must maintain accurate records substantiating all activities associated with or relevant to the conditions of approval and make them available upon request to the Department. Such records may be subject to audit by the Department or an independent auditor in accordance with section 458 of the EPBC Act, or used to verify compliance with the conditions of approval. Summaries of audits will be posted on the Department's website. The results of audits may also be publicised through the general media. Compliant All monitoring records were maintained by the construction contractor. The documentation has subsequently been transferred to TMR. The records are available for review at any time.

12. Within one (1) month of every 12 month anniversary of commencement, the approval holder must publish a report on their website addressing compliance with each of the conditions of this approval, including implementation of any management plans as specified in the conditions and effectiveness of fencing and passages in preventing koala mortality due to vehicle strike. Documentary evidence providing proof of the date of publication and non-compliance with any of the conditions of this approval must be provided to the Department at the same time as the compliance report is published. Compliant This report is the third compliance report for the Project and will be published on TMR's website.
Upon the direction of the Minister, the approval holder must ensure that an independent audit of compliance with the conditions of approval is conducted and a report submitted to the Minister. The independent auditor must be approved by the Minister prior to the commencement of the audit. Audit criteria must be agreed to by the Minister and the audit report must address the criteria to the satisfaction of the Minister.

To date, there has been no direction from the Minister to complete an independent audit.

If, at any time after two (2) years from the date of this approval, the approval holder has not commenced the action, then the approval holder must not commence the action without the written agreement of the Minister.

The Project commenced on 1 February 2016.

Unless otherwise agreed to in writing by the Minister, the approval holder must publish all reports and agreements referred to in these conditions of approval on their website. Each report and agreement must be published on the website within one (1) month of being approved by the Minister.

The research proposal referred to in Condition 7 is published on TMR’s website. The annual reports from USC are also published on the website.
