

# Section C: Traveston to Woondum

## Facts and figures - construction

- Approximately **2 million cubic metres** of earth will be moved between cuts and fills
- Within the 10.5 km project there will be **13 bridges** constructed at the following locations: Traveston Creek, Kybong Creek, Cobbs Gully, Jackass Creek, Tandur Road overpass and Woondum Road overpass
- To build the 13 bridges, **120 concrete piles** will be poured, piled and placed in location
- We need to realign small sections of **2 local roads**, Woondum and Tandur roads, to allow for the new highway to be constructed over new bridges
- **4 creeks** that the new highway will be built over will need to be diverted during construction, that means Traveston, Kybong, Cobbs Gully and Jackass creeks will require realignment. For **2 of the creeks**, Traveston and Kybong, special waterway permits mean they will need to be completed by 30 November 2016 to avoid the wet season
- To ensure the safety of animals such as koalas and kangaroos, and stop them attempting to cross the new highway once construction is complete, there will be **14.2 kilometres** of fauna fencing constructed adjacent to the highway
- To assist fauna crossing from one side of the highway to the other, **2 large fauna crossings** will be constructed under the new highway using large concrete culverts
