Bruce Highway Upgrade Program

The Bruce Highway is Queensland's major north-south freight and commuter corridor, connecting Cairns to Brisbane over a length of 1677 kilometres.

The Bruce Highway Upgrade Program is the largest road infrastructure program Queensland has ever seen. It is aimed at improving safety, flood resilience, and capacity along the length and breadth of the highway between Cairns and Brisbane.

Starting on 1 July 2013, the program was initially developed as an \$8.5 billion 10-year commitment jointly funded by the Australian and Queensland governments. In May 2018, the Australian Government committed an additional \$3.3 billion (based on 80:20 funding arrangements) to its existing \$6.7 billion commitment.

The Queensland Government also committed to providing an additional \$200 million each year (based on 80:20 funding arrangements) for upgrades on the Bruce Highway on top of the already provided \$1.8 billion. In total, the program will deliver \$12.6 billion of works over a 15-year period (2013–14 to 2027–28).

Specific commitments for Bruce Highway Cooroy to Curra (Section D: Woondum to Curra) and Rockhampton Ring Road project (subject to Australian Government funding contribution), were outlined in the additional funding, as well as:

- targeted productivity-boosting, safety and flood resilience projects
- addressing safety hot spots (such as installing wide centre line treatments and more frequent rest areas)
- · reducing the distance between electric charging stations.

Recently, further funding commitments, through the Australian and Queensland governments, have been made for the Cairns Southern Access – Stage 5.

Program status

The program is now entering its seventh year of delivery with:

- 323 projects completed
- 112 projects in the design phase or under construction
- 67 projects in the planning phase.

More projects are regularly being added to the program's scope of works as budget allows, delivering greater benefits for Queensland motorists and businesses.

Major projects status

The tables below list the confirmed key capital investment projects that form part of the Bruce Highway Upgrade Program. Other smaller projects also form part of the program but are not listed here.

Projects are listed in geographical order from Cairns to Brisbane (Pine River) by project status.

Spotlight on...

Cattle Creek and Frances Creek bridges completed

The new Frances Creek Bridge was opened to traffic in June 2018, and soon to follow, the new bridge over Cattle Creek was opened to traffic August 2018. The overall project was completed in December 2018.

This project delivered vital improvements to flood immunity, safety, freight connectivity and productivity on the Bruce Highway, between Ingham and Townsville. Detailed hydraulic modelling was undertaken to establish the height of the new bridge and manage impacts on adjoining properties. The new bridges are expected to significantly reduce Bruce Highway closures during major flood events, and eliminate closures during minor floods (which previously occurred every one to two years).

The new Cattle Creek Bridge, built to a Q100 flood immunity, will substantially reduce closures of the highway during the wet season. The original Cattle Creek Bridge sat below the floodplain causing road closures of up to 29 hours per year. The new wider and higher bridge will reduce road closures to 3.9 hours per year.

To further reduce the impact of flooding, around 5.8 kilometres of highway, consisting of road and bridge infrastructure, was raised. Included in the overall upgrade was a safer configuration to several rural intersections and a refurbishment to the Frances Creek rest area.

The Cattle and Frances Creeks Upgrade Project is just one part of the \$12.6 billion Australian and Queensland governments investment in the Bruce Highway Upgrade Program.

The \$118.9 million Cattle and Frances Creeks Upgrade project was jointly-funded with the Australian Government contributing up to \$95.1 million, and the Queensland Government contributing a further \$23.8 million.

The upgrade delivered:

- 5.8 kilometres of highway raised to reduce flooding.
- Wider lanes on both sides of the highway, improving safety for passing vehicles.
- Two new bridges.

¹ This is in addition to 667 kilometres of wide centre line treatment delivered on the Bruce Highway under other funding programs.

² This is in addition to 378 kilometres of audio tactile line marking delivered on the Bruce Highway under other funding programs.

³ Single to dual carriageway.

28_{km}

Safer roadsides provided

Safety improvement highlights

The program has achieved significant improvements to safety along the Bruce Highway with a steady 3 per cent reduction in the number of crashes and serious injuries and a 40 per cent reduction in fatalities

(per 100 million vehicle kilometres travelled) since the program began.

According to the nationally recognised Australian Road Assessment Program (AusRap) safety star rating, 85 per cent of travel along the Bruce Highway is now rated at three safety stars or more (out of a possible five stars).

In addition to the key capital investment projects, the Bruce Highway Upgrade Program has delivered a number of safety improvements.

 154_{km}

Wide centre line treatments

Shoulder sealing/widening

These have been undertaken to provide greater separation between opposing lanes of traffic 1

320km

Audio tactile line marking (raised line markings) have been installed²

Rest areas/stopping places have been constructed and seven existing rest areas/stopping places have been improved

Protected right-hand turns have been installed to help improve safety at known black spots

1.6km

Existing highway has been duplicated 3

Signalised intersections have been installed

Overtaking lanes have been constructed, providing increased safety and travel efficiency
