

Part E

Resource toolbox

Part E provides a comprehensive guide to other walking tools, policies, guidelines and websites for further information. The purpose of this module is to:

- ▶ provide an opportunity for the reader to find out more on particular topics, such as pedestrian safety, planning, design and promotion
- ▶ enable the reader to identify the key success factors and outcomes attributed to walking case studies elsewhere in Australia or overseas, and apply them to their own walking projects
- ▶ provide contacts for walking groups and organisations. These organisations may be a further information resource, or they may assist governments to effectively implement walking projects. They should be contacted and briefed during the project planning and implementation stages.

Wherever possible, web addresses (URLs) or email contact details are provided to facilitate access to source material or knowledgeable people in relevant organisations.
