Electricity prices could double with new coal-fired stations, energy experts say

By business reporter [Elysse Morgan](#)

Updated 6 minutes ago Thu 2 Feb 2017, 9:18am

Related Story: [Japan to build 45 'high-efficiency, low-energy' coal fired power plants](#)

Map: [Australia](#)

Power prices for consumers could double, not fall, if new coal-fired power stations are built, according to energy experts.

KEY POINTS:

- Australian Industry Group says new coal comparable in price to wind and solar
- Bloomberg estimates electricity prices from new coal power stations could rise to \$160 per megawatt hour
- Ai Group says coal a much worse alternative than gas as a back-up for renewables

Speaking at the National Press Club yesterday, Prime Minister Malcolm Turnbull said clean coal power stations will play a part in ensuring lower electricity prices under a Coalition Government.

"Old, high emissions coal-fired power stations are closing-down as they age, reducing baseload capacity," he said.

"They cannot simply be replaced by gas, because it's too expensive, or by wind or solar because they are intermittent."

However, key manufacturing and business lobby the Australian Industry Group and energy experts strongly disagree that coal would be cheaper or more reliable, for several reasons.

"This is not a recipe for guaranteed lower prices, in fact prices would need to be sustained at very painful levels for the life of the project for that project to make its money back," Ai Group's principle national advisor Tennant Reed told Business PM.

"Several authorities' projections, including from the CSIRO, put the price of new coal at \$80 a megawatt hour and new wind and solar around the same level, but we are seeing lower prices achieved day by day [for wind and solar]."

Ai Group's research shows that the price could easily rise to \$100 per megawatt hour as the increase in renewables means that coal plants cannot run at full capacity and charge accordingly.

The electricity price needed for newly built cleaner coal-fired generation is closer to \$160 a megawatt hour, according to work done by Bloomberg New Energy Finance.

"The price of \$80 a megawatt hour for clean coal power assumes a uniform cost of funding between wind, solar and coal and that's simply not the case," Bloomberg's Kobad Bhavnagri said.

"No Australian bank would lend on project that carries so much financial and policy risk, and most banks have ruled out funding new coal projects."

ANZ has pledged not to lend to new coal-fired power plants unless the emissions are less than 800 kilograms per megawatt hour, but most estimates show clean coal generators exceed that.

GOVT MAY FUND COAL POWER

Treasurer Scott Morrison says the Clean Energy Finance Corporation could be used to fund new clean coal power stations.

The next option would be an overseas lender, but Mr Bhavnagri argued that the risk premium the lender would build into the cost would be prohibitively expensive.

Tennant Reed agreed that private financing is highly unlikely to eventuate for new coal.

"Electricity sector investors are unlikely to finance a new coal-fired power station in Australia again," he said.

This would leave the Government to fund the project or provide some kind of guarantee, something that has not been ruled out, with Treasurer Scott Morrison telling the ABC that the Clean Energy Finance Corporation could potentially fund clean coal power stations.

RENEWABLE ENERGY COSTS FALLING FAST

The cost of clean energy is also falling rapidly.

AGL's most recent wind project at Silverton on the NSW and South Australian border is generating power at \$65 per megawatt hour.

Origin Energy's solar project in Queensland is estimated to be producing power at \$80 a megawatt hour.

Former Origin boss Grant King told investors at the time of approving the project that, "solar competes with other forms of generation".

But what of the issue of baseload power?

Ai Group, a key representative of the energy hungry manufacturing sector, said baseload power is becoming less and less critical.

"The electricity market is clearly becoming very unfriendly for such inflexible generators: much of the time there is an abundance of power from solar or wind, with rooftop solar taking a lot of demand out of the market entirely," Mr Reed wrote.

When the wind does not blow and the sun does not shine, Mr Reed said coal is the worst back-up option.

"Conventional coal plants often can't respond fast enough to serve as back-up, nor can they afford to sit around waiting to be called on," he said.

Ai Group and Bloomberg suggest that gas is a better option environmentally, with half the emissions of clean coal, but that gas supply needs to increase to make it more economical.

The possibility of a price on carbon cannot be dismissed either, and Ai Group's figures indicate that price of \$20 a tonne of carbon would add about \$16 per megawatt hour to the cost of clean coal power, half that for gas, with renewables unchanged.

Subject: FW:

Hi, would our response be something like this?

Please quote Minister for Energy Mark Bailey:

With the start of a large scale renewable industry under the Palaszczuk Government, Queensland is getting its own power stations, with 21st century technology producing affordable, clean energy.

680MW of privately funded renewable energy projects are currently in the works delivering \$1.5 billion of new investment to Queensland and more than 1200 direct jobs, mostly in our regions

The important role of baseload generation remains.

Queensland also continues to benefit from one of the youngest and least emissions-intensive fleets of coal fired generators in the nation.

Given the existing and ample supply of electricity generators, the falling cost of renewables and huge taxpayer cost to construct and run a new coal fired power station – it's clear that

maintaining the State's existing coal-generation fleet while adding more renewable energy options to the mix is the right way to take the State's regional economy forward.

There is simply no need for new coal fired baseload generation in Queensland.

This was the most interesting part:

Dr Finkel confirmed he had been contacted by the Prime Minister and asked to focus on battery storage and pumped hydro – which the review was already looking at – but not next-generation coal projects.

Turnbull's new energy adviser worked for coal industry lobby group

Sid Marris leaves role as head of climate and environment at Minerals Council of Australia to take up job with PM's office

The prime minister's appointment of a new climate and energy adviser comes amid a push from the government to build new coal-fired power generators. Photograph: Bloomberg/Bloomberg via Getty Images

Friday 3 February 2017 14.14 AEDT Last modified on Friday 3 February 2017 14.27 AEDT

Malcolm Turnbull's next climate and energy adviser will be Sid Marris, who is leaving his role as head of climate and environment at the coal industry lobby group, the Minerals Council of Australia.

The appointment comes amid a push from the Turnbull government for new coal-fired generators to be built, a suggestion enthusiastically welcomed by the Minerals Council.

Marris has worked for the Minerals Council since 2008, after spending 16 years at the Australian newspaper, filling roles including Canberra bureau chief, online political editor and economic correspondent.

The chief executive of the Minerals Council, Brendan Pearson, said: "Sid is a high-quality professional with very strong analytical and policy skills. We will miss him and wish him well."

But the pressure group 350.org said the move raised further questions about government links to the coal industry.

Analysis How Malcolm Turnbull could ignore the facts and fund the myth of 'clean' coal

The Coalition could use the Clean Energy Finance Corporation to finance new coal power stations but it wouldn't be cheaper than renewables

Read more

During his time at the Minerals Council, the group successfully fought campaigns against the mining tax and the carbon tax. The group also lobbied to have the Renewable Energy Target lowered in 2015, which the Abbott government did with Labor's support.

In 2015 the Minerals Council ran an ad campaign called Little Black Rock that spruiked the "endless possibilities" of coal.

Turnbull said this week the Clean Energy Finance Corporation should be able to fund new coal-fired power plant and resources minister Matthew Canavan has said the \$5bn Northern Australia Infrastructure Facility was open to "clean" coal projects.

On Thursday the Australian Energy Council said the industry had no plans to build new coal-fired power stations. Several energy companies, including AGL, Origin Energy and Energy Australia, have also indicated they have no plans to build new coal-fired power plants.

The news that Marris would be taking the role was first reported by the Australian Financial Review on Thursday. The prime minister's office confirmed the appointment but has not commented further.

Marris has declined to comment.

Charlie Wood, the campaigns director of the activist group 350.org, which has lobbied against the "revolving door" between politics and the coal industry, said: "It is very hard to see where the Australian government ends and the coal industry begins. They have essentially become the same thing. It is no surprise that we continue to fiddle on climate as the world burns ...

"The Minerals Council has a strong track record of lobby against climate action. If they get their way, there will be no safe climate future," Wood said.
