1. Introduction

Product Index for Bridges and Other Structures (Product Index) is a document produced to assist design and construction staff in locating materials to construct and maintain bridges and other structures that conform to the Department of Transport and Main Roads' Specifications.

This index and related documents are published on the departmental website at <http://www.tmr.qld.gov.au/business-industry/Business-with-us/Approved-products-and-suppliers/Bridges-and-other-structures-approved-products-and-suppliers.aspx>

This document is maintained by Engineering and Technology Branch (Structures). Enquiries should be directed, as indicated in the relevant product entry, to:

Dr Stephen Rae (Structures Construction Materials - SCM) on tel 3066 1162
(TMRStructuralMaterials@tmr.qld.gov.au), or

Mr Jayaratna Mahagamage (Structures Reviews and Standards – SRS) on tel 3066 8628
(TMR_Structural_Reviews@tmr.qld.gov.au).

This document is complemented by the *Registration Scheme: Suppliers and Products for Bridges and Other Structures*, and the *Proprietary Design Index for Bridges and Other Structures*. If a product cannot be found in this *Product Index* it may be within the scope of these related schemes.

2. Use of this Index

This *Product Index* should be used to identify suitable products for a particular application or activity noted in the relevant Technical Specification. Products listed are assessed against the specific requirements of the specification. The use of this *Index* to select or exclude products for other applications is not recommended. For applications outside the scope of the product categories, a case-by-case assessment will be necessary, through the usual project communication channels.

This document includes products which fall into two classifications:

1. Registered products and suppliers are evaluated against Transport and Main Roads specification requirements and are specifically mentioned as requiring registration, for that particular application. Products or suppliers for this classification may not be used on departmental projects unless they are on the list.
2. Conforming products and suppliers are also evaluated against departmental specification requirements. Products or suppliers of this classification may be used on departmental projects if they are not on this list.

In both cases it is the responsibility of the Contract Administrator to approve the use of products or suppliers for each individual project and monitor conformance requirements. Listing does not guarantee conforming performance of individual product supplied. Inspection and/or batch testing may be required by the governing specification. It is the Contractor's responsibility to ensure product is conforming and fit-for-use.

The applicable specifications are referenced in the product listing.

The performance and suitability of these products for the particular application is ultimately the risk of the Contractor. In all cases, suppliers' instructions must be followed.

3. Process for Registration

3.1 Submissions

Suppliers with products that wish to be considered for inclusion in this *Product Index* should forward an application (Form STR-F-010, available on request) including:

- company and contact details
- product information including Technical Data Sheets (TDSs), Material Safety Data Sheets (MSDSs) and relevant test results from an independent National Association of Testing Authorities (NATA) certified laboratory (or approved equivalent)
- evidence of compliance to relevant specification or drawing (including version) where applicable
- product usage history
- reference product category in the *Product Index* and reference Transport and Main Roads Technical Specifications.

A physical sample may also be requested.

3.2 Evaluation

Products shall be evaluated against the relevant specifications and, if found conforming, listed in the Product Index on the condition that:

- Product (chemical) composition does not change.
- Product dimensions do not change.
- Performance is maintained.

Should the product composition or design change, or the specification / drawing is updated, a new application submission will be required.

3.3 Product removal

Products may be removed from the Product Index for the following reasons:

- discontinuation of supply or availability
- poor performance
- non-compliance to reference specifications.

Suppliers will be notified of removal in writing.

4. Product Index management

To maintain the accuracy of this Product Index, suppliers shall notify Engineering and Technology of any changes to contact or product details.

5. Registered and Conforming Products

5.1 Anchors for prestressing strand

Registered product: MRTS89

Structures Reviews and Standards (SRS)

Supplier	Product name
Australian Prestressing Services Pty Ltd P: 07 3376 4400	APS multi strand system (not including couplers) APS post tensioned slab system
Freyssinet Australia P: 07 3862 0100	Freyssinet 'C' range multi strand system (including mono strand couplers) Freyssinet 'S' range slab tendon system
StrongForce Pty Ltd P: 07 3883 2765	StrongForce multi strand system
SRG Limited P: 07 3442 3500	Slab post tensioning systems BBR Cona multi strand post tensioning system Type K couplers for up to 31 x 12.7 mm strands up to 42 x 15.2 mm extra strands
VSL Australia Pty Ltd P: 02 9484 5944	VSL multi strand post tensioning system (including couplers) VSL post tensioning system for slabs

5.25 Expansion joints (alternative types)

Alternate product: Project-specific supplementary specification

SRS

These expansion joint types are not within the scope of the current specification MRTS82 *Bridge Deck Expansion Joints*. Therefore, the designer needs to consider joint types specified in MRTS82 firstly and the alternative types shall only be used if the bridge designer demonstrates the benefit of using these joint types. Project specific supplementary specifications shall be developed, reviewed and approved if these joint types are used.

The department is considering incorporating other joint types for the next revision of MRTS82. Therefore, until MRTS82 is revised, evaluations of new products will be undertaken on a case-by-case basis for this expansion joint category.
