

Concrete Pipe Association
of Australasia

Transport and Main Roads (TMR) Technical Specification
MRTS25 (September 2014) 'Steel Reinforced Precast Concrete Pipes'

Notice of Amended Annexure MRTS25.1 August 2016

To Principals, Designers, Manufacturers, Contractors and Contract Administrators of steel reinforced precast concrete pipes for TMR projects.

MRTS25 (September 2014) details design, manufacturing, construction and contractual requirements for steel reinforced precast concrete pipes. The Engineering & Technology Branch (E&T) of TMR has been and continues to work with the Concrete Pipe Association of Australasia (CPAA) towards a revised version of this specification.

For use until a revised MRTS25 is updated and published, Annexure MRTS25.1 *Steel Reinforced Precast Concrete Pipes* has been amended. This annexure shall be used on new TMR contracts. It is recommended that consideration be given to the benefits of adopting this amended annexure for existing contracts.

The amendments to MRTS25 listed in the annexure are presented to overcome difficulties during the procurement of pipes. Tenders based on these amendments, accompanied by a supplier registration certificate can be considered conforming.

This notice and amended Annexure MRTS25.1 have been developed collaboratively between TMR and CPAA.
