Technical Specification

Transport and Main Roads Specifications
MRTS221 Provision of Help Telephones

October 2010
1 Introduction

This specification defines the design, supply, installation, testing and commissioning, performance, documentation, training and maintenance requirements for help telephones.

The help telephones shall be installed on the roadside to enable motorists to contact the Principal’s TMC to report an incident or request assistance.

2 Standard specification

All equipment and material, where not otherwise specified, shall be in accordance with the appropriate Australian Standard Specifications, where such exist; and in their absence, with appropriate British Standard Specifications.

Where standard specifications are quoted or implied, the latest version shall be applicable, including its amendments to date.

This specification shall be read in conjunction with Transport and Main Roads Specifications and Transport and Main Roads Standard Drawings, including MRTS01 Introduction to Technical Specifications and MRS50 Specific Quality System Requirements.

All electrical wiring and associated equipment shall comply with the requirements of AS/NZS 3000 Wiring Rules.

All telecommunications equipment shall comply with relevant Australian Communications & Media Authority technical standards and requirements.

All radio communications shall comply with the requirements of the Australian Department of Communications.

3 Reference documents

The requirements of the referenced documents listed in Table 3 of MRTS201 General Equipment Requirements and Table 3 below apply to this specification. Where there are inconsistencies between this specification and the referenced MRTS documents, the requirements specified in this specification shall take precedence.

5 Scope

The scope of this specification includes the following:

- Supply and/or installation of help phones including equipment enclosure and mounting post
- Supply and/or installation of supporting infrastructure including conduits, pits, static signs, solar power supplies and the like
- Act for, and on behalf of the Principal in arranging connection of leased telecommunications services where appropriate
• All design, documentation, supply, installation, disconnection, removal, relocation, connection, testing and commissioning of the abovementioned works.

6 Quality system requirements

The quality system requirements defined in MRTS201 General Equipment Requirements apply to this specification. Additional quality system requirements relevant under this specification are defined below.

The Principal reserves the right to evaluate the subcontractor’s quality system throughout the contract. Arrangements for conducting evaluations shall be at a time, convenient to both parties and shall be confirmed in writing.

7 Samples for acceptance

The requirements defined in MRTS201 apply to this specification.

8 Functional requirements

The help telephones shall be easy and intuitive to operate by the general public in a roadside environment without any prior training. Calls shall be able to be originated by either a motorist at the roadside help telephone, or the operator in the Principal’s TMC. The help telephones shall be provided to operate in accordance with TRUM Manual, Section 2.1 - “Emergency Telephones”.

Preference shall be given to a help telephone design that allows connection with the TMC via the following options:

1. the Principal’s private copper communication lines. The help telephone shall be allocated a standard PABX extension number. The help telephone shall be capable of autodailing a specified internal extension number associated with the PABX at the Principal’s TMC, or

2. the PSTN. The help telephone shall be allocated a standard 10-digit telephone number. The help telephone shall be capable of autodailing a specified external line number associated with the PABX at the Principal’s TMC, or

3. use a full duplex, cellular phone based on standard public telecommunication networks (such as 2G/2.5G (GPRS) / 3G or 3.5G (HSDPA)) or later generation of public cellular telephone networks. Cellular phones shall connect with the network that provides the most reliable coverage at the site. Where more than one network can provide reliable coverage to the site, connection via GSM shall be the first preference. The help telephone shall be allocated a standard 10-digit telephone number. The help telephone shall be capable of autodailing a specified external line number associated with the PABX at the Principal’s TMC.

Where more than one of the above options of connection to the Principal's TMC is available (or economical to provide) at the help phone site, help phones shall be connected directly to the Principal's private communication lines as the first preference. Cellular connections may be used where a copper connection is not available, or provides unreliable service. Leased communication channels shall use the Principal's preferred network carrier as advised by the Principal's voice communications co-ordinator.
9 Operational requirements

The operational requirements defined in MRTS201 apply to equipment provided under this specification. Additional operational requirements for equipment provided under this specification are described below.

9.1 Automatic volume control

Help telephones shall have an automatic volume control so they can operate in a high noise environment with up to 95 dB(A) of traffic noise plus 85 dB(A) of air supply noise.

9.2 Call answering at Help Phone

The help telephone shall sound a ringing tone at the site upon receiving a call from the operator in the Principal's TMC until the call is answered.

Where a handset is provided, the call from the operator in the Principal's TMC shall be considered as answered upon lifting the handset.

Where a handset is NOT provided, the call shall be considered as answered after a variable period between 0 and 10 seconds (initially set to 4 seconds) after the call is initiated by the TMC operator.

9.3 Call initiation at Help Phone

The help telephones shall have the facility to initiate the call and dial the Principal's TMC and make a connection. The telephone number of the operator in the Principal's TMC shall be able to be stored in the telephone unit. The phone shall use DTMF tones.

Where a PSTN line or cellular phone is used, the call shall be initiated using a single push button to dial the pre-programmed number. Where the Principal's communications lines are used, the call shall be initiated when the handset is picked up, or using a single push button.

9.4 Call disconnection

Where handsets are provided, the call shall disconnect when the handset is returned to its storage position by the use of a magnetic reed switch or equivalent. The Principal's TMC operator shall be allowed to disconnect the call when the handset is not returned to its storage position for an extended period of time.

Where handsets are NOT provided, the call shall automatically disconnect after the operator in the Principal's TMC disconnects.

9.5 Compliance requirements

The help telephone installation shall comply with the following documents:

a) AS/ACIF S002
b) AS/ACIF S003
c) AS/ACIF S004
d) AS/NZS CISPR 22
e) AS/NZS 4117, and
f) AS/NZS 60950.
10 Mechanical and physical requirements

10.1 General

The mechanical and physical requirements defined in MRTS201 General Equipment Requirements apply to this specification. Additional mechanical and physical requirements relevant under this specification are defined below.

10.2 Enclosure

All electronics, switches and the handset (where supplied) shall be installed in a cast or extruded aluminium housing. The design of the enclosure shall enable the equipment installed within the enclosure to operate in the environmental conditions specified in Clause 12.

A handset symbol, similar to that shown in the TRUM Manual, Section 2.1 – “Emergency Telephones”, Drawing GE7-6, shall be provided on the outer-most vertical faces of the enclosure.

All doors and openings in the help telephone shall be provided with a durable and resilient weatherproof seal.

When installed, in normal service, the help telephone shall provide a degree of protection of at least IP55 in accordance with AS 60529.

The enclosure shall be vermin proof, including termites, ants, bees and mice.

10.3 Handset

Where provided, the handset shall be attached to the telephone using a stainless-steel, vandal-resistant, flexible cord to protect the internal wiring. The flexible cord shall be anchored within the telephone body and the handset in such a manner and length that ensures the door closes and seals correctly.

The handset shall rest on an immovable cradle. The cradle shall provide easy, seating alignment of the handset when hanging up.

10.4 Front panel

A numeric keypad that is accessible to the public is not permitted. The handset or call initiation button shall be mounted on the front panel. Where a handset is provided, the front panel shall be housed behind an access door as specified below.

10.5 Access door

Where provided, the access door of the help telephone shall:

a) be incorporated to provide access to the telephone unit and handset
b) not open more than 180 degrees from its closed position
c) have a size as close as possible to the external dimensions of the cabinet consistent with mechanical strength requirements
d) be hinged on the left-hand side. The hinges shall not protrude from the housing, and shall not allow removal of the hinge pins, and
e) be fitted with a self-closing mechanism, to automatically force the door to remain closed when not in use.
10.6 Exterior finish
Exterior colour: Mid Blue B15 as defined in AS 2700.
Interior colour (where viewed by public): Mid Blue B15 as defined in AS 2700.

11 Electrical requirements

11.1 General
The help telephone shall be capable of operating on a standard 48 (or 24) Vdc analogue telephone line, mains power with battery power supply or solar power supply.

It shall be possible to remotely monitor the status of the telephone, including all accessories including (but not be limited to) potential and actual problems with the speaker, microphone and solar power supply (where provided).

11.2 Solar power supply
Where a solar power supply is provided, it shall include a solar panel mounted 3 m above areas accessible to the public, and orientated for maximum average power output.

Batteries shall be fully sealed, rechargeable and maintenance free with a minimum lifetime of 3 years in the installed environment. They shall operate the connected load at the site continuously for 72 hours without recharge and have a continuous charge controller.

12 Installation requirements

12.1 General
The help telephones and associated advisory signs shall be installed in accordance with the Main Roads Road planning and Design Manual and the Main Roads TRUM Manual, Section 2.1 – “Emergency Telephones.

All signs associated with the help telephones shall comply with the requirements of Part 8 of the Transport and Main Roads Manual of Uniform Traffic Control Devices.

12.2 Mounting facilities
Help telephones shall be installed at the locations shown on the design documentation, using a vandal resistant mount. Where a help telephone is mounted on a post, the installation shall be in accordance with TRUM Manual, Section 2.1 – “Emergency Telephones”, Drawing TC9799.

12.3 Pits and ducts
Cable enclosure infrastructure shall be provided in accordance with MRTS91.

12.4 Provision for connection to telecommunication lines
Provision for connection to telecommunications lines shall be provided in accordance with the requirements of ACMA. Cable access shall be incorporated in the help telephone mounting arrangement.

12.5 Caller instructions
A weather-proof, aluminium label detailing the caller instructions for using the help telephone shall be provided on the Front Panel or inside the door. The label shall display engraved, black text (minimum size 4 mm) in a sans-serif font. The label shall be fixed by a non-adhesive, vandal-resistant method.
13 Environmental requirements

The environmental requirements defined in MRTS201 General Equipment Requirements apply to this specification. Additional environmental requirements relevant to this specification are defined below:

a) maximum noise conditions likely to be occur at the installation site.

14 Testing and commissioning

The testing and commissioning requirements defined in MRTS201 General Equipment Requirements apply to this specification.

15 Documentation

The documentation requirements defined in MRTS201 General Equipment Requirements apply to this specification.

16 Training

The training requirements defined in MRTS201 General Equipment Requirements apply to this specification.

17 Maintenance

The maintenance requirements defined in MRTS201 General Equipment Requirements apply to this specification.

18 Handover

The handover requirements defined in MRTS201 General Equipment Requirements apply to this specification.
