**Notes:**

- Plumbing and drainage shall not be connected to storm water drainage under any circumstances.
- NOTE: vegetation not illustrated.

**Planting Drainage:**
- Subsoil drain Type B (height modified) (WPS03), minimum 300 x 300 grid emphasized.
  - Connect to long-hauled storm water drainage.
- TYPICAL: 300 depth.
- BACKFILL SOIL MATERIAL: Depth varies dependent on drainage level.
- CUT-OFF: Minimum depth 100.
- SPRING: Maximum depth 300.
- Subsoil
- BACKFILL Minimum 300 depth

**Road pavement:**
- Compressed subgrade material
- Road subsoil drainage (Type B above)

**Notes:**

1. **Application:** Where subsoil modification is required, amendments shall be applied to the surface prior to ground preparation operations.
2. **Sweeping:** Where ground has been:
   - previously compacted or
   - subject to vehicular traffic
3. **Sweeping:** Shall ensure compacted subsoil sufficiently to allow the subsequent cultivation operation.
4. **DRAINAGE:** Shall break up the surface of the subsoil sufficiently to produce a fine-graded material.
5. **GROUND PREPARATION:** Non-contaminated stone, rubble and other deleterious material brought to the surface during ground preparation operations shall be removed.
6. **SUSPENDED PARTICULATE MATTER (SPM):** Shall be constructed in accordance with WPS03.
7. **TYPICAL:** Depths and minimum depths where sediment has occurred. Alluvium shall be made for sediment during installation.
8. **TYPICAL:** After installation, notice prior to harvest from resulting from planting and other planting operations.
9. **SUSPENDED:** Shall be treated before planting.
10. **TYPICAL:** Depths and minimum depths where sediment has occurred. Alluvium shall be made for sediment during installation.
11. **NOTES:**
    - Listed in accordance with Standard Drawing 1053.
    - Specified in accordance with Standard Drawings 1053, 1054, 1055, and 1056, as indicate above.
12. **ASSOCIATED DEPARTMENTAL DOCUMENTS:**
