

DETAIL 1
1650 TURF
 SLOPE ≤ 1 ON 4

DETAIL 2
1650 TURF
 SLOPE > 1 ON 4

NOTES:

1. AMELIORATION: Where subsoil amelioration is required, ameliorants shall be applied to the surface prior to ground preparation operations (ripping, cultivation or roughening).
2. GROUND PREPARATION including ripping, cultivation and roughening shall be carried out parallel to the contours.
3. Treatments adjacent to hardstand areas shall be in accordance with Standard Drawing 1644.
4. ROUGHENING shall roughen and form keys in the subsoil to prevent subsequent material slipping down the face of the slope.
5. RIPPING is required only where ground has been:
 - previously compacted; or
 - used by vehicular traffic.
 - ie. decommissioned site compounds, building pads, parking areas, stock pile areas, roads and haul routes
6. RIPPING shall shatter compacted subsoil sufficiently to allow the subsequent cultivation operation.
7. CULTIVATION shall break up the surface of the subsoil sufficiently to produce a finely tilled material.
8. GROUND PREPARATION: Non-conforming stone, rubble and other deleterious material brought to the surface during ground preparation operations, shall be removed.
9. TOPSOIL: Depths are after settlement has occurred. Allowance shall be made for settlement during installation.
10. TURF: Topsoil in turf areas shall be raked smooth and compacted lightly and uniformly to promote even settlement.
11. TURF shall be laid parallel to the contour with joints staggered and hard butted together.
12. TURF shall be rolled or tamped to achieve consistent contact with topsoil.
13. TURF: In pedestrian areas joints shall be top dressed with sand to ensure even surface finish.
14. SIGHT VISIBILITY AREAS within areas to be grass shall be turfed and not grass seeded.
15. DIMENSIONS are in millimetres unless shown otherwise.
