NOTES:

- AMELIORATION: Where subsoil amelioration is required, ameliorants shall be applied to the surface prior to ground preparation operations (ripping, cultivation or roughening).
- GROUND PREPARATION: Non-conforming stone, rubble and other deleterious material brought to the surface during ground preparation operations, shall be removed.
- TOPSOIL: Depths are after settlement has occurred. Allowance shall be made for settlement during installation.
- TOPSOIL: After installation no compaction is to occur apart from compaction resulting from mulching or other planting operations.
- PLANTING HOLE shall be twice the diameter of the rootball and to the depth of the container.
- FERTILISER shall be placed at half the pit depth around the rootball. Fertiliser shall not be placed at the base of the hole or in contact with the plant root system.
- PLANT shall be installed so that the top of the root ball is level with the surrounding finished ground level.
- MULCH shall not contaminate planting hole material.
- MULCH shall be evenly spread smooth. Depths are minimum depths after settlement has occurred. Allowance shall be made for settlement during installation.
- PLANTS must be installed in accordance with design constraints (clearzone, sight visibility, and other vegetation setbacks and clearances);
 - as shown on the Drawings; or
 - in the Road Landscape Manual - Appendix 4, where not shown on the Drawings
- PLANT: Sufficient plant tags shall be left on plants to allow identification of each plant species in any given area.
- STAKING: Where staking within 5m of hardstand areas, stakes are to be installed parallel to the hardstand area.
- DIMENSIONS are in millimetres unless shown otherwise.
