DESIGN CRITERIA

The purpose of this drawing is to provide standard details and forms for the design of the bridge. The details shall be used to construct the bridge in accordance with the project's specifications. In accordance with the specifications, the bridge shall be designed to meet the specific project requirements.

The bridge shall be constructed of concrete and shall be designed to support the load of the project. The bridge shall be designed to withstand the expected loads and environmental conditions.

The bridge shall be designed to accommodate the necessary traffic and pedestrian flow. The bridge shall be designed to be visually appealing and to complement the surrounding environment.

The bridge shall be designed to be constructed in a cost-effective manner. The materials used shall be selected to ensure durability and long-term performance.

The bridge shall be designed to be easily maintainable. The bridge shall be designed to allow for easy access to the bridge's components for maintenance and repair.

The bridge shall be designed to meet all applicable codes and regulations. The bridge shall be designed to be compliant with all applicable building codes and regulations.

ALTERNATE TOE WALL DETAILS (TYPE B)

The alternate toe wall details shall be designed to provide additional support for the bridge's toe area. The alternate toe wall details shall be designed to meet the specific project requirements.

The alternate toe wall details shall be designed to be constructed of concrete and shall be designed to support the loads of the bridge. The alternate toe wall details shall be designed to be visually appealing and to complement the surrounding environment.

The alternate toe wall details shall be designed to be constructed in a cost-effective manner. The materials used shall be selected to ensure durability and long-term performance.

The alternate toe wall details shall be designed to be easily maintainable. The alternate toe wall details shall be designed to allow for easy access to the bridge's components for maintenance and repair.

The alternate toe wall details shall be designed to meet all applicable codes and regulations. The alternate toe wall details shall be designed to be compliant with all applicable building codes and regulations.
