About this document

This document sets out the principles for the design of street name and community facility name signs, and for their mounting and placement to ensure clear visibility to the road user.

How to use this document

This document is designed to be read and applied together with AS 1742.5-2017 *Manual of Uniform Traffic Control Devices Part 5* (AS 1742.5-2017). You must have access to the Australian Standard to understand what applies in Queensland.

This document:

- sets out how AS 1742.5-2017 applies in Queensland
- has precedence over AS 1742.5-2017 when applied in Queensland
- has the same section and clause numbering and headings as AS 1742.5-2017.

The following table summarises the relationship between AS 1742.5-2017 and this document:

Applicability	Meaning
Accepted	The Australian Standard section or clause is accepted.
Accepted, with amendments	Part or all of the section or clause has been accepted with additions, deletions or differences.
New	There is no equivalent section or clause in the Australian Standard.
Not accepted	The Australian Standard section or clause is not accepted.

Definitions

The following general amended definitions apply when reading AS 1742.5-2017.

Reference to...	Means
AS 1742.5-2017	AS 1742.5-2017, as amended by this document For example, a reference to AS 1742.5-2017 means you must refer to the Australian Standard Part 5, and Part 5 of the <i>Queensland Manual of Uniform Traffic Control Devices</i> (Queensland MUTCD). Throughout AS 1742.5-2017, references are made to other parts of the Australian Standards (for example, when reading Part 1 you may be referred to Part 3 for further information.) In this case, you must refer to the equivalent Part within the Queensland MUTCD first. Check the applicability of the equivalent Part in the Queensland MUTCD before referring to the referenced Australian Standard Part.

 2.11.5 *Cross street naming at grade separations* 1

1 Scope and general

1.4 Definitions

1.4.3 Should

Addition

Indicates a recommendation. Where the word 'should' is used, it is considered to be recommended usage, but not mandatory. Any recommendation that is not applied must be based on sound traffic engineering judgement and documented.

2 Street name signs

2.11 Additional street naming on arterial roads in urban areas

2.11.5 Cross street naming at grade separations

Difference

Signs showing the names of streets crossing an arterial road at a grade separation where there are no connections, should be placed on the overpass structure or side mounted near the underpass by use of a G3-4-Q01 sign. Legend for overhead signs on high speed road structures should be 200 EM.
