

# Coorparoo Level Crossing Precinct Planning

September 2024

**We are investigating safety, accessibility and congestion improvements for the Coorparoo level crossing precinct.**

The Department of Transport and Main Roads (TMR) is undertaking a Coorparoo Level Crossing Precinct Study jointly funded by the Australian and Queensland Governments. The study will examine options to improve the Cavendish Road, Coorparoo and nearby Stanley Street East level crossings and the surrounding precinct.

## Cavendish Road level crossing

The Cavendish Road level crossing is located adjacent to the Coorparoo Train Station and is used by a number of high frequency bus services. Due to its inner-city location and proximity to busy roads, high density and commercial land uses, the Cavendish Road level crossing experiences high vehicle, bike and pedestrian volumes.

## Stanley Street East level crossing

The Stanley Street East level crossing is approximately 350 metres north-east of the Cavendish Road crossing. While the crossing experiences less traffic than the Cavendish Road crossing, it is an important local access route for residential communities and recreational uses.

## Study focus

The study will consider traffic and pedestrian movements, precinct and rail accessibility, bus and rail connectivity, active transport connections, and access to the Coorparoo Station and park 'n' ride facilities.

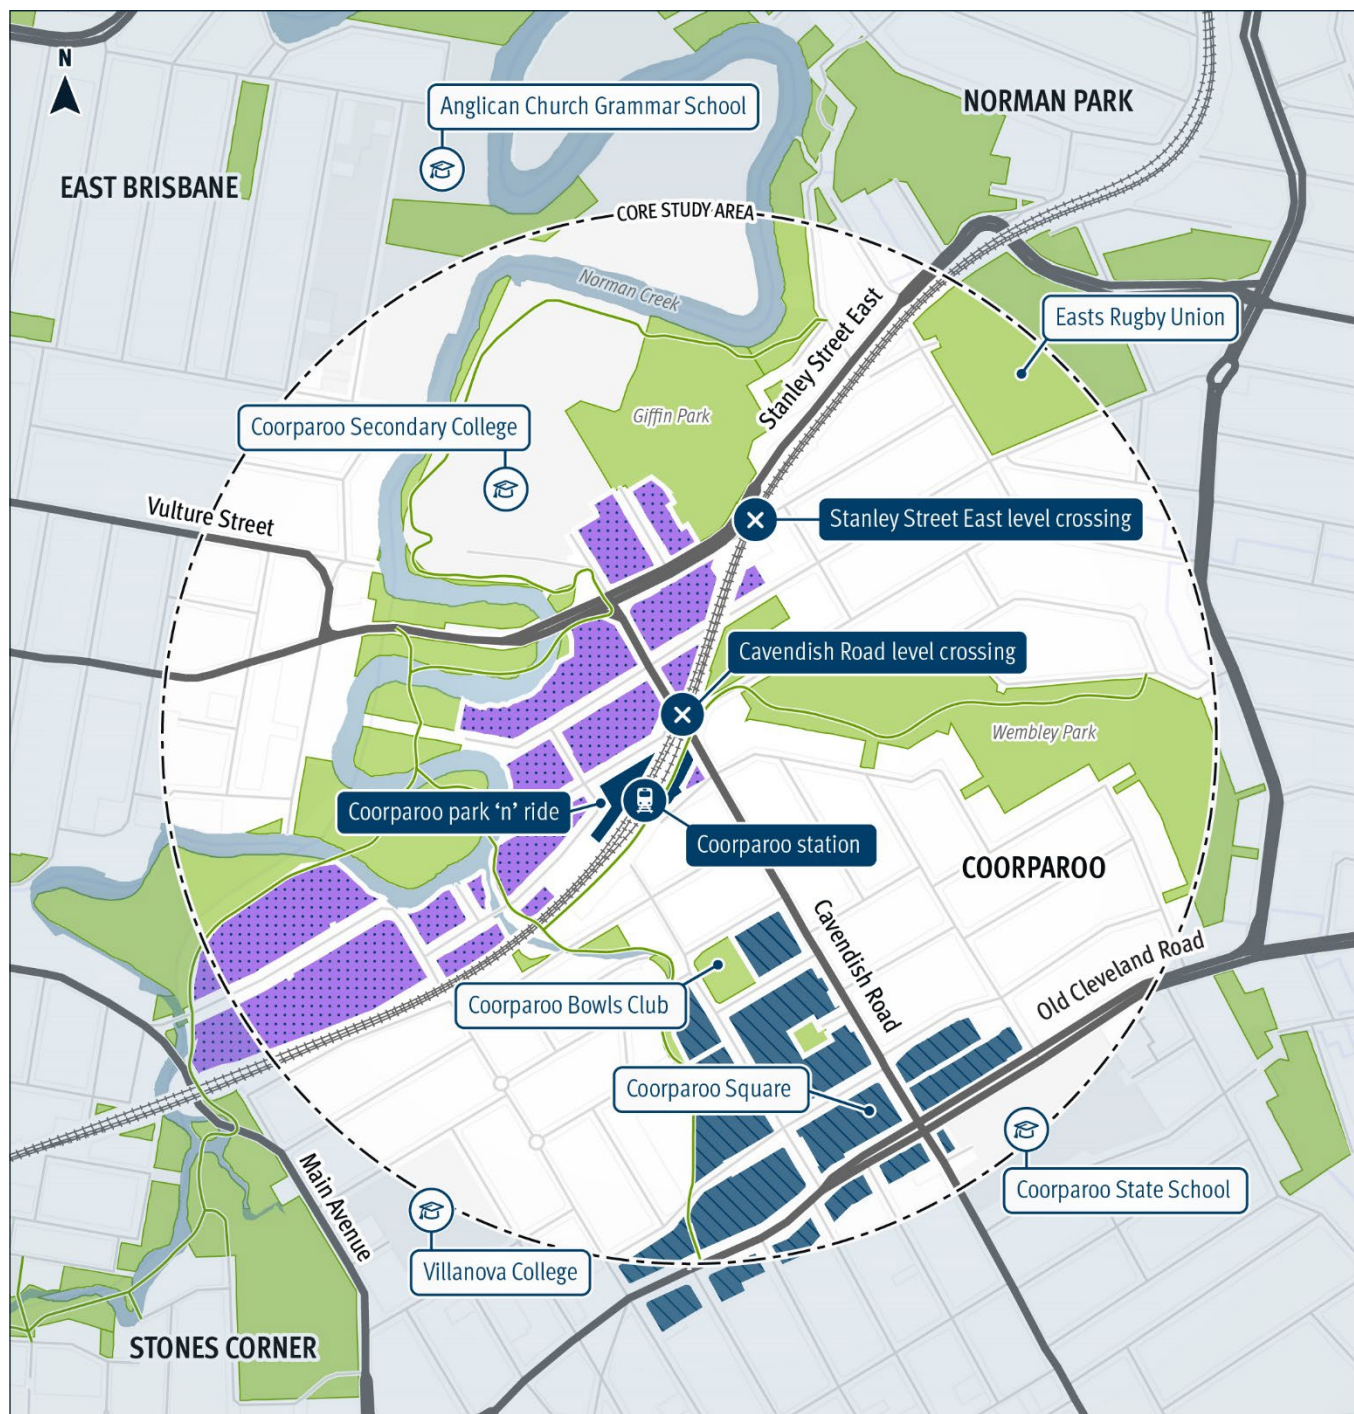

The precinct focus ensures consideration is given to key arterial roads in the area such as Stanley Street, Vulture Street and Old Cleveland Road. These roads are important connections to the Brisbane CBD, supporting thousands of daily trips for commuters and business.

The study will investigate a range of available options including intersection upgrades, pedestrian and cycle improvements, traffic management treatments and other network planning changes, and grade separating road from rail.

## Current funding

- \$100 million (includes \$1.5 million planning funding) – Australian Government.
- \$1.5 million planning – Queensland Government.
- Further project funding subject to negotiation with Brisbane City Council

### Legend

- Roads    +---+ Rail line    — Bike and walking paths
- Station    Park 'n' ride    Parks / greenspace    Shopping and high density residential
- Level crossing    Industry / commercial    Education

## Next steps

Commencement of planning and technical investigations including community consultation to understand the current and future transport challenges and opportunities in the precinct.
