Logan on track for better rail connections, improved stations

- The Queensland Government has hit key milestones for Logan and Gold Coast Faster Rail (LGC) and Loganlea Station Relocation projects this week.
- Construction of the platform and pedestrian footbridge at the new Loganlea station is underway with the first section of the footbridge installed over the weekend.
- The latest designs for Edens Landing station precinct are now available online for community feedback, with engagement sessions throughout March.

Significant rail upgrades for the Logan community are picking up pace, with the construction of the new Loganlea station and the release of Edens Landing station precinct updated designs.

The Loganlea Station Relocation project will see a new station built directly opposite Logan Hospital, improving links to key local destinations including TAFE Queensland's Loganlea Campus, and Loganlea State High School.

On site assembly of the pedestrian bridge for the new station began earlier this year, and on Saturday 21 February, a 480 tonne crane lifted the first section of the pedestrian footbridge over the rail corridor into place, marking a significant milestone in the progress of the project.

Jointly funded by the Australian and Queensland governments, the Loganlea Station Relocation will better connect customers with nearby health, education and community services.

Major construction works now also underway on site include the first of two new platforms, station building, new park 'n' ride, and local road works.

The new Loganlea station is expected to open in 2027, with the existing station to remain open to customers in the meantime.

Along the same rail corridor, precinct upgrades at the nearby Edens Landing station are now open to community feedback, with the latest designs released as part of the Logan and Gold Coast Faster Rail Project (LGC).

Community engagement sessions commence next Monday, 2 March 2026 and information is [available online](#).

The new design incorporates feedback from earlier community and stakeholder engagement.

Edens Landing station is being upgraded to improve accessibility, safety and customer experience, with an updated design repositioning the station to align with Eddy Avenue.

The design also includes improved walking and cycling connections to destinations including Edens Parkland, Leighton Fields, Grove Road Reserve and Holmview Park, improved park 'n' ride and kiss 'n' ride facilities and new bus stops.

A new active transport bridge will be built, providing a walking connection from Houdini Terrace, south of the rail corridor, to Holmview Road, north of the corridor.

LGC will double the tracks along a 20 kilometre corridor of rail line between Kuraby and Beenleigh, increasing the rail network capacity, improving reliability of services and reducing end-to-end journey times between Brisbane and the Gold Coast.

The updated designs for the final two station precincts at Holmview and Beenleigh are being progressed and refined and will be shared with the community in the coming months.

Department of Transport and Main Roads A/Deputy Director-General Rail Jane Brander said it was exciting to see real progress on these key projects for the Logan community.

“Loganlea station is an important transport hub that helps the surrounding community connect to South East Queensland,” Ms Brander said.

“It is fantastic to see the relocated station coming together to provide a safe, convenient, and accessible station upgrade for those who live, visit and work in the area.

“The release of the updated designs for Edens Landing station precinct is the next key milestone for the Logan and Gold Coast Faster Rail project, which will deliver a critical upgrade to South East Queensland’s rail network and improve the traffic flow by removing five level crossings.

“We’re pleased to be presenting the updated designs to the community and look forward to locals providing feedback at the upcoming engagement sessions.”
