

# Media statement

21 October 2026

- Construction on intersection upgrades at two key locations in Yugar is expected to commence next month.
- Improvements will assist with traffic flow and network efficiency at the intersections of Mount Samson Road and Eatons Crossing Road, and Mount Samson Road and Gibbons Road.
- The project follows traffic assessments, ongoing monitoring and community feedback.

The Queensland Government is delivering road safety and efficiency improvements, with construction set to begin on intersection upgrades at two key locations in Yugar.

The works will upgrade the intersections of Samson Road and Eatons Crossing Road, and Mount Samson Road and Gibbons Road following investigations and monitoring of both intersections to improve safety and traffic flow.

On Eatons Crossing Road, a new auxiliary left-turn lane will be delivered at the Mount Samson Road intersection while works will be undertaken to improve access and manoeuvrability for larger vehicles at the Gibbons Road intersection.

Construction is expected to commence in early November 2026 and continue for approximately three months, weather and construction conditions permitting.

Motorists may experience temporary changed traffic conditions during construction, including lane closures and possible delays. Road users are encouraged to allow extra travel time, follow traffic management signage and drive to conditions.

A/Regional Director, North Coast Region Justin Valks said the upgrades showed the Queensland Government's continued commitment to improving the road network.

"These works will improve access and manoeuvrability for larger vehicles and improve traffic flow and network efficiency for motorists travelling through Yugar," Mr Valks said.

"This is another example of the Queensland Government investing in practical, targeted improvements that respond to community feedback and improve the way our road network operates for local residents and visitors:-

"Following the completion of the Strathpine-Samford Road Route Safety Project, we committed to continuing to monitor these intersections and take action where further improvements could deliver benefits. This project is the result of that commitment."
