

Materials Testing Manual

Publication Update

Edition 5, Amendment 4 of the *Materials Testing Manual* (MTM) has been issued as at 28 September 2020.

Implementation

Notwithstanding any contractual requirements for projects current as of 28 September 2020 or any requirements for NATA accreditation, the MTM should be implemented immediately.

For existing projects, testing should continue using the methods published at the start of the contract. It is not the intention to force unnecessary rework on existing projects.

The *Materials Testing Manual* applies to all road projects and other work the department is responsible for and is therefore applicable to our Consultants and Contractors.

Edition 5, Amendment 4 – September 2020

Part	Test Method	Description of change
	All	<ul style="list-style-type: none"> Replace complying with conforming as appropriate Include requirement to report method used in the form 'The number of this test method, that is Q###'.
1	Introduction	<ul style="list-style-type: none"> Mark AS 2103 and AS 1984 as withdrawn in Table 4.1 Add ISO standards 463 and 13385-1 to Table 4.2 Add JIS standard B 7503 to Table 4.2 Add Test Methods Q105 and Q358 to Table 8
2	Application	<ul style="list-style-type: none"> Amend references throughout to align with <i>Pavement Rehabilitation Manual</i>, February 2020 Add references to Test Method Q135B to Tables 3.6, 4.5 and 7.6 Add references to Test Method Q251A to Tables 3.4, 4.4 and 7.4 Add references to Test Method Q251B to Tables 3.6, 4.5 and 7.6 Add references to Test Method Q251C to Table 7.4
4	Q050	<ul style="list-style-type: none"> Replace 'available area' with 'available perimeter' in Step 8.2.2 Replace 'available area' with 'interval' in Step 8.3
5	Q101A	<ul style="list-style-type: none"> Add rotary sample divider to Section 3 Add new Section 6 with instructions for use of rotary sample divider
	Q101B	<ul style="list-style-type: none"> Add rotary sample divider to Section 3 Add new Section 6 with instructions for use of rotary sample divider
	Q101D	<ul style="list-style-type: none"> Replace reference to Australian Standard AS 1152 with ISO 3310 in Section 3.
	Q113B	<ul style="list-style-type: none"> Amended rammer details in Table 2 to align with requirements in Sub-section 3.9
	Q115	<ul style="list-style-type: none"> Amend Section 2 to add the testing recycled materials to the scope Replace reference to withdrawn Australian Standard AS 1984 with ISO 13385-1 and JIS B 7507 in Section 3.2 Add new Sub-section 5.3 for testing recycled materials Amend Section 10 to add reporting requirements for recycled materials
	Q135A	<ul style="list-style-type: none"> Replace both curing container and airtight container with sealable container throughout the method Amend Steps 7.2.5 and 7.3.5 to include guidance on loosening material adhering to the inside of the mixer
	Q135B	<ul style="list-style-type: none"> Amend Table 1 to add the standard curing conditions for recycled materials

Part	Test Method	Description of change
	Q135C	<ul style="list-style-type: none"> • Replace 'environmental chamber' with 'environmental cabinet' in Table 1 to align terminology with Sections 3 and 5 • Remove standard curing conditions for laboratory mixed – plant mixed stabilisation from Table 1 • Remove as received modulus curing requirements for field mixed materials from Table 1 • Remove initial curing in an environmental chamber for seven and fourteen day cured modulus specimens from Table 1 • Amend times for curing in drying oven to reflect changes in Test Method Q139
	Q138A	<ul style="list-style-type: none"> • Amend the compaction process in Steps 7.3.5 and 7.3.7 to discard the filter papers after compaction is completed and require the specimen be in contact with the base plate after the specimen is inverted • Add the recording of the date and time of compaction to Step 7.3.8 • Add the reporting of date and time of compaction to Section 8 • Remove reference to field mixed materials from Note 9.4 • Change to test portion mass in Note 9.11 to 2700 g. Recommended limit to the test portion size to indicate test portions of similar size should be compacted
	Q138B	<ul style="list-style-type: none"> • Remove callipers from Section 3 • Amend the compaction process in Steps 6.1.5 and 6.1.7 to discard the filter papers after compaction is completed and require the specimen be in contact with the base plate after the specimen is inverted • Add the recording of the date and time of compaction to Step 6.1.8 • Add the reporting of date and time of compaction to Section 7 • Remove reference to laboratory mixed materials from Note 9.2 • Change to test portion mass in Note 8.3 to 2700 g. Recommended limit to the test portion size to indicate test portions of similar size should be compacted

Part	Test Method	Description of change
	Q139	<ul style="list-style-type: none"> • Replace reference to withdrawn Australian Standard AS 1984 with ISO 13385-1 and JIS B 7507 in Sub-section 4.5 • Replace references to Steps 7.1, 7.1.4 and 7.5 with 6.1, 6.1.4 and 6.5 in Sub-section 5.1 • Amend Step 5.1.1 to allow for the preparation of six test specimens • Amend Steps 5.1.1 to 5.1.3 to allow for the preparation and compaction of three test specimens for initial modulus. These specimens are then discarded. • Amend Steps 5.1.4 to 5.1.7 to allow for testing of the three remaining specimens prepared in Step 5.1.1 for cured and soaked modulus • Add requirement to test cured modulus specimens at 72 hours after compaction in Step 5.1.5 • Remove Sub-section 5.2 • Add '(insitu materials)' to title of Sub-section 5.2 • Add requirement to test cured modulus specimens at 72 hours after compaction in Step 5.2.2 • Replace references to Steps 6.1.2 and 6.1.7 with 5.1.2 and 5.1.7 in Sub-sections 5.2 and 5.3 • Remove references to as received modulus from Steps 5.2.1 and 5.3.2 • Add '(plant mixed materials)' to title of Sub-section 5.3 • Add requirement to test cured modulus specimens at 72, 168 and 336 hours after compaction in Steps 5.3.2, 5.3.3 and 5.3.4 respectively • Replace references to Steps 6.1.2 and 6.1.3 with 5.1.2 and 5.1.3 in Sub-section 5.4 • Replace references to Steps 6.1.6 and 6.1.7 with 5.1.6 and 5.1.7 in Sub-section 5.4 • Replace references to Steps 7.4.3 with 6.4.3 in Sub-section 6.4 • Remove reference to plant-mixed material from Sub-section 8.1 • Remove requirements to report for laboratory mixed – plant-mixed materials in Sub-section 8.7.2 • Remove reference to as received modulus from Sub-section 8.8.1 • Remove reference to initial modulus from Sub-section 8.8.2 • Replace references to Steps 7.4.3 and 7.4.6 with 6.4.3 and 6.4.6 in Note 9.4
	Q144A	<ul style="list-style-type: none"> • Insert calculations for mean maximum dry density, mean optimum moisture content, mean oversize density and mean percentage of oversize in Section 4
	Q148	<ul style="list-style-type: none"> • Amend mould requirements in Sub-section 3.1 • Amend mixing apparatus in Sub-section 3.3 to allow mixing of test portions before compaction • Add grease proof paper to Section 4 • Reduce test portion size in Step 5.4 • Include Step 6.9 to reference Test Method Q135A for mixing by either hand or machine for materials without stabilising agent. • Amend the compaction process in Section 7 to include grease proof paper and match current practice. • Include reporting of target dry density and achieved moisture content to Section 9

Part	Test Method	Description of change
	Q149	<ul style="list-style-type: none"> Remove wheel tracker mould from Section 3 Add plastic film to Section 4 Remove Section 5 Add test temperature and one-hour equilibration to Step 5.2 Add the covering of test specimen to reduce moisture loss to Steps 5.4 and 5.5 Amend Step 5.5 to add additional criteria for termination of test, that is, when granular materials start falling into the rut Add requirement to report reason for terminating test prior to specified number of cycles to Section 7 Add requirement to report rut depth at specified cycles to Section 7 Add requirement to include a semi-logarithmic plot of rut depth versus cycles in Section 7 Add Table 1 with apparatus tolerances
	Q251A	<ul style="list-style-type: none"> Remove references to testing materials in their natural state from Section 2 and Table 2
	Q251C	NEW METHOD
	Q257	<ul style="list-style-type: none"> Replace reference to withdrawn Australian Standard AS 2103 with ISO 463 and JIS B 7503 in clause 3.1b) Replace meeting with conforming in clauses 3.1a) and 3.1b) Add calliper to apparatus in Section 3 Amend calculation in Step 9.5.2 to change the divisor from 1,000 to 1,000,000 to obtain the correct conversion from g to kN
6	Q171	WITHDRAWN
	Q172	WITHDRAWN
	Q181C	<ul style="list-style-type: none"> Replace reference to withdrawn Australian Standard AS 1984 with ISO 13385-1 and JIS B 7507 in Sub-section 3.5 Remove last paragraph from Section 2. Requirement for particle size distribution to be performed is no longer a requirement of the test method Remove reference to ASTM D6027 from clause 3.1d) and Table 1 Note 1 Remove reference to determination of particle size distribution from Step 4.3 Remove requirements from Step 4.4 that are not required when samples passing 19.0 mm test sieve are used as defined in Step 4.2 Amend Step 5.4.1 to allow a small load to be applied to be applied to the sample when assembling the normal loading system Add requirements for maximum indicated error and maximum repeatability to Table 1 Change requirement for minimum resolution from 0.002 mm to 0.01 mm
	Q185	<ul style="list-style-type: none"> Replace reference to withdrawn Australian Standard AS 1984 with ISO 13385-1 and JIS B 7507 in Sub-section 3.4
	Q188	<ul style="list-style-type: none"> Major revision of the method to include specific requirements for assessing quarried materials used on Transport and Main Roads projects
7	Q229A	<ul style="list-style-type: none"> Add reference to ASTM D6928 Figure 1 to Section 3
	Q229B	<ul style="list-style-type: none"> Add reference to ASTM D6928 Figure 1 to Section 3

Part	Test Method	Description of change
8	Q308C	<ul style="list-style-type: none"> Remove all references to Dean and Stark apparatus for removing water from mix Remove all apparatus, procedural and, calculation requirements for determination of binder content and particle size distribution Include 105–110°C drying oven in Section 3 Add oven drying procedure to Section 4 Add references to test methods AS 2891.3.1, Q308A, Q308D or AG:PT/T234 for determination of binder content and particle size distribution to Section 4 Add requirements for reporting the oven drying process to Section 5 Add requirements to report binder content and particle size distribution as detailed in test methods AS 2891.3.1, Q308A, Q308D or AG:PT/T234 to Section 5
	Q312	WITHDRAWN

	Q712	<ul style="list-style-type: none"> Remove reference to withdrawn Australian Standard AS 1003 from Section 1
	Q726A	NEW METHOD
	Q726B	NEW METHOD

Edition 5, Amendment 3 – January 2020

Part	Test Method	Description of change
1	Introduction	<ul style="list-style-type: none"> Add standard EN 1426 to Table 4. Add test method Q478 and Q479 to Table 5. Add CIA – Concrete Institute of Australia to the Notes for Table 5.
5	Q104A	<ul style="list-style-type: none"> Add reference to standard EN 1426 to Sub-section 3.1, to align general apparatus requirements for cone penetrometer with AS 1289.3.9.1. Include requirement to report method used in the form “The number of this test method, that is Q###” to Section 7.
	Q104D	<ul style="list-style-type: none"> Add reference to standard EN 1426 to Sub-section 3.1, to align general apparatus requirements for cone penetrometer with AS 1289.3.9.1. Include requirement to report method used in the form “The number of this test method, that is Q###” to Section 7.
	Q113A	<ul style="list-style-type: none"> Replace “compactive effort (596 kJ/m³)” with “standard compactive effort (596 kJ/m³)” in Section 2. Amend references to other clauses in Steps 5.3.10 to 5.3.12. Include units of measurement for CBR in Step 6.4.5 and Table 4.
	Q113B	<ul style="list-style-type: none"> Replace “compactive effort (2703 kJ/m³)” with “modified compactive effort (2703 kJ/m³)” in Section 2. Amend references to other clauses in Steps 5.3.10 to 5.3.12. Include units of measurement for CBR in Step 6.4.5 and Table 4.
	Q113C	<ul style="list-style-type: none"> Include units of measurement for CBR in Step 6.6.5 and Table 4.
	Q115	<ul style="list-style-type: none"> Change constant from 0.899296 to 0.899651 in Step 9.3.2.
	Q138A	<ul style="list-style-type: none"> Include reporting of maximum dry density and optimum moisture content in Section 8.
6	Q181C	<ul style="list-style-type: none"> Replace “standard compactive effort (596 kJ/m³)” with “modified compactive effort (2703 kJ/m³)” in Section 2. Replace “three layers” with “five layers” in Step 5.11.1 a).
		<ul style="list-style-type: none"> Change resolution of force measuring device for shear from 1 N to not greater than 5 N in Clause 3.1 c). Remove resolution requirements for displacement measuring devices from clause 3.1 d). Add reference to ASTM D6027 for calibration requirements of displacement measuring devices in clause 3.1 d) to align with ASTM D3080.

Part	Test Method	Description of change
		<ul style="list-style-type: none"> Refer to Table 1 for resolution and percent error requirements of displacement measuring devices in Clause 3.1 d) to align with ASTM D3080. Add requirements for checking masses where used in vertical loading system in Clause 3.1 e) to align with ASTM D3080. Add requirements for load cell complying with AS 2193 where used in vertical loading system in Clause 3.1 e). Include requirement to report method used in the form "The number of this test method, that is Q####" to Section 7. Amend Table 1 to include resolution and percent error requirements for displacement measuring devices to align with ASTM D6027.
10	Q478	NEW METHOD
	Q479	NEW METHOD

Edition 5, Amendment 2 – October 2019

Part	Test Method	Description of change
1	Introduction	<ul style="list-style-type: none"> Add abbreviation APHA to Table 2.
5	Q106	<ul style="list-style-type: none"> Remove reference to Note 8.6 from Step 5.1.5.
	Q135A	<ul style="list-style-type: none"> Renumber Clauses 3.2.7 and 3.2.8 to 3.3 and 3.4.
	Q135B	<ul style="list-style-type: none"> Add curing requirements for lime, lime/flyash and lime/slag for UCS, RLT, CR and AWT testing to Table 1.
	Q135C	<ul style="list-style-type: none"> Align oven curing temperatures in Table 1 with the requirements for the oven in Clause 3.2.
	Q136A	<ul style="list-style-type: none"> Replace achieved dry density with UCS in Clause 9.3.
	Q142B	<ul style="list-style-type: none"> Amend Step 5.11.1, Note 9.2 and Table 1 to align compaction requirements for layer and blows to AS 1289.5.2.1.
12	Q708B	<ul style="list-style-type: none"> Amend Clause 6.7 i) to only record defects related to culverts. Remove Clause 7.2 and related reporting requirement in Clause 8.1 i). Remove requirement to report calibration relationship used in Clause 8.1 d). Include requirement to report surface type in Clause 8.1. Remove requirement to report GNSS coordinates from Clause 8.2.

Edition 5, Amendment 1 – July 2019

Part	Test Method	Description of change
	All	<ul style="list-style-type: none"> Include requirement to report method used in the form "The number of this test method, that is Q####".
1	Introduction	<ul style="list-style-type: none"> Add reference to <i>Austroroads Glossary of Terms</i> for definitions to Subsection 3.2. Add reference to <i>Austroroads Glossary of Terms</i> for abbreviations to Subsection 3.4. Add reference to ASTM International methods to Section 5. Remove definitions for earthworks, in situ stabilisation, nominal size and stabilisation from Table 1. These definitions are now contained in the <i>Austroroads Glossary of Terms</i>. Remove abbreviations GNSS, GPS, IRI, LS, MDD, OMC, PI, PMB and UCS from Table 2. These abbreviations are now contained in the <i>Austroroads Glossary of Terms</i>. Remove reference to ISO 11648-2 from Table 4.

Part	Test Method	Description of change
		<ul style="list-style-type: none"> Remove test methods Q202, Q205A, Q205B, Q205C, Q214A, Q214B, Q217, Q319, Q320, Q705 and Q706 from Table 5. Add test methods Q050 and Q060 to Table 2.
2	Application	<ul style="list-style-type: none"> Add Section 1 – Purpose to the document. Consolidate all references in the document into a new Section 2. Rewrite Introduction and Background sections throughout the document. Replace any requirements or tables that are reproductions from other sources with a reference to the original source. Update parts of the document to align with the latest editions of Transport and Main Roads Technical Specifications MRTS07A, 07B, 07C and 09. Update parts of the document to align with the proposed new edition of the <i>Pavement Rehabilitation Manual</i>.
3	Q020	<ul style="list-style-type: none"> Remove references to MRTS04, 30 and 40 from Section 1. Include Step 3.2 referencing MRTS01 for acceptance constant. Amend reporting requirements for mean and standard deviation in Step 5.1. Add Step 5.2 to report characteristic value and reference to MRTS01. Add Step 5.4 including reporting of source of acceptance constant, identification of specification requiring reporting of characteristic value and requirement to report use of unrounded data. Remove test methods Q134 and Q482 from Note 6.1. Add test methods AS 2891.9.2 and AS 2891.9.3 to Note 6.2. Add test methods AS 2891.9.2 to Note 6.3. Remove Tables 1, 2, 3, 4 and 5.
4	Q050	<ul style="list-style-type: none"> Replace relevant sections with references to equivalent parts of AS 1289.1.4.1 and AS 1289.1.4.2. Allow use of computer generated random numbers.
	Q060	<ul style="list-style-type: none"> Remove sampling frame, shield board and mechanical stream cutter from apparatus list in Section 4. Adjust number sample increments to align with AS 1141.3.1 in Step 5.1. Replace techniques in Subsections 7.1, 7.2, 8.1, 8.3, 8.4, 8.6, 9.1, 9.3, 10.1 and 10.2 with references to equivalent parts of AS 1141.3.1. Adjust sampling process to align with AS 1141.3.1 in Sub-sections 7.3, 7.4, 8.4, 9.2 and 9.3. Remove Sub-section 8.2. Remove Section 11. Remove Notes 14.4 and 14.5. Adjust minimum sample and sample increment masses to align with AS 1141.3.1 in Tables 1 and 2.
	Q061	<ul style="list-style-type: none"> Remove Farmers Friend shovel from apparatus, Clause 3.3.3. Remove sampling using Framers Friend shovel from Step 6.5.1. Include Step 6.1.7 for stabilised materials to mark or otherwise identify the sampling location so additional testing may be performed at the location after compaction is complete.
5	Q106	<ul style="list-style-type: none"> Remove Steps 5.1.5 and 5.1.6 from Section 5. Remove Note 8.6.
	Q113A	<ul style="list-style-type: none"> Correct reference to Note 8.3 in Clause 3.1. Remove the specific blow distribution requirements from Step 5.3.3.
	Q113B	<ul style="list-style-type: none"> Remove the specific blow distribution requirements from Step 5.3.3.

Part	Test Method	Description of change
	Q113C	<ul style="list-style-type: none"> Remove levelling plate, level and rigid foundation and straightedge from Section 3. Remove mould oil from Section 4. Remove Note 8.5.
	Q115	<ul style="list-style-type: none"> Correct references to notes in Steps 5.3.2 and 10.3 c). Remove rounding of calculated results from Steps 9.1.1, 9.1.2 and 9.3.3. Remove Note 11.4 to align test method with requirements of technical specifications such as MRTS10.
	Q125D	<ul style="list-style-type: none"> Remove levelling plate, level and rigid foundation, mallet and straightedge from Section 3. Remove mould oil from Section 4. Remove Note 11.2.
	Q135A	<ul style="list-style-type: none"> Include apparatus for machine mixing in Subsection 3.1. List apparatus for amelioration separately in Subsection 3.2. Align requirements for rammer with AS test methods in clause 3.2.5. Add a balance and measuring cylinder to Section 3. Exclude the use of bagged supplies of dry stabilising agents in Section 4. Exclude the use of quicklime in Section 4. Replace the term “conditioning” with ‘amelioration’ throughout the method. Add new Section 7 for machine mixing.
	Q135B	<ul style="list-style-type: none"> Include techniques for curing slab specimens in Steps 4.2 a), 4.3 and Table 1.
	Q136A	<ul style="list-style-type: none"> Add sealable containers and scarifying tool to Section 4. Include reporting a table of working time data in Section 9. Include reporting a plot of working time data in Section 9. Replace Figures 1 and 2 with examples showing curves of best fit.
	Q136B	<ul style="list-style-type: none"> Include reporting a table of working time data in Section 11. Include reporting a plot of working time data in Section 11.
	Q137	<ul style="list-style-type: none"> Add steel rammer, material height gauge, sealable containers and mixing apparatus to Section 3. Add mould oil to Section 4. Add Note 10.2 with dimensions of material height gauge. Add Note 10.2 for mould oil. Add Table 1 with dimensions of RLT equipment. Add Table 2 with dimensions of rammers.
	Q138A	<ul style="list-style-type: none"> In Clause 3.2.1 change collar thickness from 9.5 mm to 4.75 mm to align requirements of ASTM D5581. Amend moisture adjustment for dry stabilised agent in Step 6.1.3.
	Q138B	<ul style="list-style-type: none"> In clause 3.1.1 change collar thickness from 9.5 mm to 4.75 mm to align requirements of ASTM D5581.
	Q139	<ul style="list-style-type: none"> Replace reference to Test Method Q138 with Q138A and Q138B in Section 2. Amend reporting requirements for individual specimens and average results in clauses 8.7, 8.8 and 8.9.
	Q140A	<ul style="list-style-type: none"> Include requirement to sample using Test Method Q061 Section 6 in Step 4.1.3 b) ii. Add requirement that moisture content samples be placed in a drying oven within the same work shift as the material is placed to Steps 4.1.3 b) ii and 4.2.2.

Part	Test Method	Description of change
		<ul style="list-style-type: none"> Add requirement to complete wet density testing within 24 hours of the end of the work shift in which the material is placed.
	Q142A	<ul style="list-style-type: none"> Remove the specific blow distribution requirements from Step 5.11.2 b). In Step 5.15 add requirement that moisture content samples be placed in a drying oven within the same work shift as the material is placed. In Step 5.10 b) remove reference to Test Method Q140A.
	Q142B	<ul style="list-style-type: none"> Remove the specific blow distribution requirements from Step 5.11.2 b). In Step 5.15 add requirement that moisture content samples be placed in a drying oven within the same work shift as the material is placed. In Step 5.10 b) remove reference to Test Method Q140A.
	Q144A	<ul style="list-style-type: none"> Include reference to Test Method Q061 Section 6 for sampling in Step 3.4.1
	Q145A	<ul style="list-style-type: none"> Add balance, levelling plate, rubber mallet, level and rigid foundation, straightedge, mixing apparatus and scarifying tool to Section 3 Add mould oil to Section 4 Add Note 10.1 for mould oil Remove Note 11.2
	Q148	<ul style="list-style-type: none"> Add scarifying tool to Section 3. Remove reference to Test Method Q145A from Section 3. Add mould oil to Section 4. Include techniques for preparing and compacting stabilised specimens in Section 5. Include compacted material in Step 7.17.
	Q149	<ul style="list-style-type: none"> Remove Step 4.6

Edition 4, Amendment 3 – September 2017

Part	Test Method	Description of change
1	Introduction	<ul style="list-style-type: none"> Replace Pavement Design Manual with Pavement Design Supplement in the list of departmental publications in Section 1. Add MRTS10 <i>Plant-mixed Lightly Bound Pavements</i> to the list of Transport and Main Roads Technical Specifications in sub-section 3.2. Table 2 containing equivalent methods revised.
2	Q020	<ul style="list-style-type: none"> Allow the use of results from Q306B and Q306C in the same lot by referencing Note 6.3 from Step 3.1. Add a note to Table 1 to allow linear interpolation of values. Change the rounding of the relative compaction for Test Method Q140A in Table 3 from 0.1 to 0.5%. Change the rounding of the stabilising agent content for Test Method Q314 in Table 3 from 0.01 to 0.1%. Change the description of the test in Table 3 from relative density (asphalt) to relative compaction.
3	Q050	<ul style="list-style-type: none"> Remove Section 5. Definitions for random sampling, stratified random sampling and systematic stratified random sampling are included in MRTS01 <i>Introduction to Technical Specifications</i>.
	Q060	<ul style="list-style-type: none"> Remove some definitions in Section 5. Definitions for lot and sub-lot are included in MRTS01 <i>Introduction to Technical Specifications</i>. Definitions for nominal size, sample and sampling location are included in the Introduction to this manual. Add new Section 11 for representative sampling from compacted or uncompacted layers of pavement or earthworks.
	Q061	<ul style="list-style-type: none"> Remove Section 4. Definition for lot is included in MRTS01 <i>Introduction to Technical Specifications</i>. Definitions for nominal size, sample and sampling location are included in the Introduction to this manual. Amend Step 5.3.4 to align with the requirements of <i>Nuclear Gauge Testing Manual</i> Test Method N01.

Part	Test Method	Description of change
		<ul style="list-style-type: none"> • Include Sub-section 5.4 for sampling for stabilisation testing. • Add plant required for Sub-section 5.4 to Section 3.
	Q080	NEW METHOD
4	Q101E	<ul style="list-style-type: none"> • Incorporate most requirements of Road and Maritime Services Test Methods T102 and T103 into method.
	Q103A	<ul style="list-style-type: none"> • Add 0.212 mm sieve to apparatus to reflect changes in AS 1726.
	Q103C	<ul style="list-style-type: none"> • Minor editorial changes. • Add 0.212 mm sieve to apparatus to reflect changes in AS 1726. • Add 0.425 mm sieve to apparatus to allow calculation of fines ratio. • Amend calculation in Step 6.1.5 b) by removing "1000" and "A". • Remove the graphing of effective depth against hydrometer reading from Step 6.1.6 a). • Remove the requirement to report hydrometer calibration data from Step 6.2.7 and replace with the determination of a linear regression relationship. • Include the recording of the elapsed time of hydrometer reading in minutes in Step 7.6.5 b). • Include calculations for sieve results and fines ratio in Section 8. • Include reporting of sieve results and fines ratio in Section 9. • Remove Note 10.7.
	Q109	<ul style="list-style-type: none"> • Amend Section 1 to remove reference to reporting interval. • Change the rounding of the apparent particle density in Section 6 from 0.001 to 0.01 t/m³.
	Q109A	<ul style="list-style-type: none"> • Amend Section 1 to remove reference to reporting interval. • Change the value for comparing duplicate tests in Step 6.2 from 0.020 to 0.02 t/m³. • Change the rounding of the apparent particle density (fine fraction) in Section 7 from 0.001 to 0.01 t/m³. • Change the water density values in Table 1 from four significant figures to three significant figures.
	Q109B	<ul style="list-style-type: none"> • Amend Section 1 to remove reference to reporting interval. • Change the value for comparing duplicate tests in Step 5.2 from 0.020 to 0.02 t/m³. • Change the rounding of the apparent particle density (coarse fraction) in Section 6 from 0.001 to 0.01 t/m³. • Change the water density values in Table 1 from four significant figures to three significant figures.
	Q113A	<ul style="list-style-type: none"> • Amend preparation requirements in Step 5.1.2 to discard material retained on 19.0 mm sieve and thoroughly remix the sieved material • Amend preparation requirements in Step 5.1.3 to include a reference to Test method Q101 Steps 6.2.4 to 6.2.6. • Add requirement to record the times for the commencement and completion of curing and a reference to Note 8.9 to Step 5.1.5. • Remove rounding of calculated values in Step 6.1.1. • Reference Test Method Q102A for rounding of moisture content values in Section 7. • Change the rounding of the compacted dry density in Section 7 from 0.001 to 0.01 t/m³. • Change the rounding of the optimum moisture content (OMC) in Section 7 to 0.5% for all moisture content values. • Include definition of CBR MDD for reporting in Step 7.1.4. • Include definition of CBR OMC for reporting in Step 7.1.5.

Part	Test Method	Description of change
		<ul style="list-style-type: none"> • Add requirement to report the duration of curing and the method to determine plasticity in Section 7. • Include the use of visual/tactile assessment of plasticity to determine the curing period in Note 8.9. • Amend Table 4 to change reporting intervals for CBR values.
	Q113B	<ul style="list-style-type: none"> • Amend preparation requirements in Step 5.1.2 to discard material retained on 19.0 mm sieve and thoroughly remix the sieved material. • Amend preparation requirements in Step 5.1.3 to include a reference to Test Method Q101 Steps 6.2.4 to 6.2.6. • Add requirement to record the times for the commencement and completion of curing and a reference to Note 8.9 to Step 5.1.5. • Remove rounding of calculated values in Step 6.1.1. • Reference Test Method Q102A for rounding of moisture content values in Section 7. • Change the rounding of the compacted dry density in Section 7 from 0.001 to 0.01 t/m³. • Change the rounding of the optimum moisture content (OMC) in Section 7 to 0.5% for all moisture content values. • Include definition of CBR MDD for reporting in Step 7.1.4 • Include definition of CBR OMC for reporting in Step 7.1.5 • Add requirement to report the duration of curing and the method to determine plasticity in Section 7 • Include the use of visual/tactile assessment of plasticity to determine the curing period in Note 8.9. • Amend Table 4 to change reporting intervals for CBR values.
4	Q113C	<ul style="list-style-type: none"> • Amend preparation requirements in Step 5.1.2 to discard material retained on 19.0 mm sieve and thoroughly remix the sieved material. • Amend preparation requirements in Step 5.1.3 to include a reference to Test Method Q101 Steps 6.2.4 to 6.2.6. • Add requirement to record the times for the commencement and completion of curing and a reference to Note 8.9 to Step 5.2.5. • Align Step 5.5.6 with reporting requirements, that is, final moisture contents are obtained and reported. • Change the value for comparing achieved and target compacted dry density in Step 6.2 from 0.020 to 0.02 t/m³. • Align Step 6.5 with reporting requirements, that is, swell is measured and reported. • Change the rounding of the target compacted dry density in Section 7 from 0.001 to 0.01 t/m³. • Change the rounding of the nominated relative compaction in Section 7 from 0.1 to 0.5%. • Reference Test Method Q102A for rounding of moisture content values in Section 7. • Add requirement to report the duration of curing and the method to determine plasticity in Section 7. • Include the use of visual/tactile assessment of plasticity to determine the curing period in Note 8.9. • Amend Table 4 to change reporting intervals for CBR values.
	Q114B	<ul style="list-style-type: none"> • Amend Table 2 to change reporting intervals for CBR values.
	Q115	<ul style="list-style-type: none"> • Amend preparation requirements in Step 5.1.2 to discard material retained on 19.0 mm sieve and thoroughly remix the sieved material. • Amend Step 5.1.3 to require a minimum of three UCS test portions to be prepared. • Add Notes 12.6 and 12.7 to provide guidance on preparing test specimens. • Replace Sub-section 6.2 with a reference to Test Method Q145A for the compaction of field mixed specimens. • Amend Step 8.1.1 to allow specimens with ends levelled using a surface plate to be tested uncapped.

Part	Test Method	Description of change
		<ul style="list-style-type: none"> • Add Step 8.1.2 to not require the capping of the surface compacted against the mould baseplate. • Include the reporting of achieved compacted dry density and achieved compaction moisture content for field in Section 11 for field mixed materials.
	Q134	<ul style="list-style-type: none"> • Include a 4 hour time limit between mixing and completion of test in Section 2. • Add Sub-section 5.3 to check the minimum sample size and buffer solution volume will provide a temperature rise of at least 4°C.
	Q135B	<ul style="list-style-type: none"> • Amend Table 1 to allow 28 day curing for lightly bound cement/cementitious blended materials.
	Q136	<ul style="list-style-type: none"> • Include a default target moisture content of OMC in Section 2. • Amend preparation requirements in Step 6.2 to discard material retained on 19.0 mm sieve and thoroughly remix the sieved material. • Amend Sub-section 8.1 to clarify the plotting of the working time v mean achieved maximum dry density and the use of the plot to determine the working time for MDD. • Amend Sub-section 8.2 to clarify the plotting of the working time v mean UCS and the use of the plot to determine the working time for UCS. • Correct reference in Step 7.3.1. • Change symbol in Step 7.2.1 f) from MRR to MDD.
4	Q137	<ul style="list-style-type: none"> • Include a definition of the gauge length for the extensometer in the Section 3. • Amend preparation requirements in Step 4.4 to include a reference to Test Method Q101 Steps 6.2.4 to 6.2.6. • Add Note 9.4 to allow the dimensions of the mould to be used in place of trying to measure fragile specimen dimensions.
	Q138	<ul style="list-style-type: none"> • Replace reference to 19.0 mm sieve with a 37.5 mm sieve in Section 2. • Include Interfoam as a suggested foaming additive in Section 4. • Amend preparation requirements in Step 5.2 to include a reference to Test Method Q101 Steps 6.2.4 to 6.2.6. • Modify the calculations in Step 6.1.5 to ensure the correct bitumen mass is used to calculate the mass of foaming agent required. • Amend Steps 7.1.2 to 7.1.6 to ensure the correct process is used to determine the mass of foaming agent required.
	Q139	<ul style="list-style-type: none"> • Include a reference to Test Method Q070 for obtaining cored specimen in Section 2. • Relax the tolerance on oven curing times from 2 hours to 4 hours in Subsections 6.1 to 6.4. • Provide additional detail to specimen setup in Subsection 7.1 and Note 10.3 • Amend the process for preconditioning and test setting determination to clarify the use of computer and software control in Subsection 7.4 and Notes 10.4 and 10.5. • Allow the reporting of testing where the preconditioning did not achieve a resilient strain within the specified range in Step 9.3.
	Q140A	<ul style="list-style-type: none"> • Include an option to calculate a maximum characteristic relative compaction for a lot in Step 5.1.6 and 5.2.7. • Include an option to calculate a minimum characteristic relative compaction for a lot in Step 5.1.7 and 5.2.8. • Add the calculation and reporting of adjusted moisture variation in Sections 5 and 6. • Change the rounding of the relative compaction in Section 6 from 0.1 to 0.5%. • Change the rounding of the adjusted laboratory reference dry or wet density in Section 6 from 0.001 to 0.01 t/m³. • Change the rounding of the maximum dry density or maximum converted wet density in Section 6 from 0.001 to 0.01 t/m³.

Part	Test Method	Description of change
		<ul style="list-style-type: none"> • Change the rounding of the optimum moisture content or the estimated optimum moisture content in Section 6 from 0.1 to 0.5%. • Change the rounding of the density of the dry or wet oversize in Section 6 from 0.001 to 0.01 t/m³. • Change the rounding of the compacted dry or wet density in Section 6 from 0.001 to 0.01 t/m³. • Remove Table 1. • Include a reference to relevant technical specifications or annexure's as the source of working times for materials in Note 7.1 to replace Table 1.
	Q141B	<ul style="list-style-type: none"> • Amend Section 1 to include reference to maximum test-hole depth. • Amend the definition of depth limits in Step 6.1 and Table 1 from "maximum practical depth" to "maximum depth". • Amend the maximum test-hole depth in Step 6.1 and Table 1 from 250 mm to 300 mm. • Remove the rounding of calculated values from Steps 10.1 to 10.3. • Change the rounding of the compacted dry or wet density in Section 11 from 0.001 to 0.01 t/m³.
	Q142A	<ul style="list-style-type: none"> • Add requirement to record the times for the commencement and completion of curing to Steps 5.7.1, 5.7.2 and 5.7.3. • Include curing times aligned with Q113C by adding a reference to Note 9.9, Note 9.10 and Table 3 to Step 5.7.1. • Change the rounding of the standard maximum dry density in Section 7 from 0.001 to 0.01 t/m³. • Change the rounding of the standard optimum moisture content in Section 7 from 0.1 to 0.5%. • Remove "standard" from clauses 7.2 and 7.3. • Include reporting of compactive effort (standard) used in Section 7. • Add requirement to report the duration of curing and the method to determine plasticity in Section 7 for materials without stabilising agents. • Amend Note 9.1 to allow the use of mechanical compaction provided it is comparable to manual compaction. • Include the use of visual/tactile assessment of plasticity to determine the curing period in Note 9.9. • Include a relaxation of curing times for compaction control testing in Note 9.10.
	Q142B	<ul style="list-style-type: none"> • Add requirement to record the times for the commencement and completion of curing to Steps 5.7.1, 5.7.2 and 5.7.3. • Include curing times aligned with Q113C by adding a reference to Note 9.9, Note 9.10 and Table 3 to Step 5.7.1. • Change the rounding of the standard maximum dry density in Section 7 from 0.001 to 0.01 t/m³. • Change the rounding of the standard optimum moisture content in Section 7 from 0.1 to 0.5%. • Remove "modified" from clauses 7.2 and 7.3. • Include reporting of compactive effort (standard) used in Section 7. • Add requirement to report the duration of curing and the method to determine plasticity in Section 7 for materials without stabilising agents. • Amend Note 9.1 to allow the use of mechanical compaction provided it is comparable to manual compaction. • Include the use of visual/tactile assessment of plasticity to determine the curing period in Note 9.9. • Include a relaxation of curing times for compaction control testing in Note 9.10.
	Q142C	<ul style="list-style-type: none"> • Replace reference to Appendix C with Test Method Q101C in Step 5.6. • Add calculation of moisture correction to Section 6. • Add calculation and reporting of moisture variation to Sections 6 and 7. • Change the rounding of the maximum converted wet density in Section 7 from 0.001 to 0.01 t/m³. • Remove the reporting of the optimum added/removed moisture content in Section 7.

Part	Test Method	Description of change
		<ul style="list-style-type: none"> Change the rounding of the estimated optimum moisture content in Section 7 from 0.1 to 0.5%. Include reporting of compactive effort (standard) used in Section 7. Amend Note 9.1 to allow the use of mechanical compaction provided it is comparable to manual compaction. Add Note 8.9 to define the range of application for moisture correction.
	Q143	<ul style="list-style-type: none"> Amend Step 5.1 to allow the use of the wet mass of oversize material when calculating the volume of oversize. Change the rounding of the density of the dry or wet oversize in Section 6 from 0.001 to 0.01 t/m³.
	Q144A	<ul style="list-style-type: none"> Amend Subsection 3.1 to apply to sampling of quarry materials only. Add Subsection 3.2 for sampling of plant mixed materials other than foamed bitumen. Add Subsection 3.3 for sampling of plant mixed foamed bitumen. Add Step 5.5.2 for checking the assigned values for plant mixed materials other than foamed bitumen. Add Step 5.5.3 for checking the assigned values for plant mixed foamed bitumen. Change the rounding of the assigned maximum dry density in Section 6 from 0.001 to 0.01 t/m³. Change the rounding of the assigned optimum moisture content in Section 6 from 0.1 to 0.5%. Change the rounding of the assigned density of the dry or wet oversize in Section 6 from 0.001 to 0.01 t/m³. Remove "standard or modified" from clauses 6.1 and 6.2. Include requirement to report the sieve used to determine oversized material, that is, 19.0 or 37.5 mm. Include reporting of compactive effort (standard) used in Section 7
	Q145A	<ul style="list-style-type: none"> Include the scarification of layers to promote bonding and interlock in Step 6.5. Remove the rounding of calculated values from Steps 7.1 to 7.4. Change the rounding of the target compacted dry density in Section 8 from 0.001 to 0.01 t/m³. Change the rounding of the nominated relative compaction in Section 8 from 0.1 to 0.5%. Change the rounding of the achieved compacted dry density in Section 8 from 0.001 to 0.01 t/m³. Change the rounding of the achieved relative compaction in Section 8 from 0.1 to 0.5%.
	Q146	<ul style="list-style-type: none"> Change the rounding of the compacted dry density in Section 5 from 0.001 to 0.01 t/m³. Change the rounding of the apparent particle density in Section 5 from 0.001 to 0.01 t/m³.
	Q147B	<ul style="list-style-type: none"> Change the rounding of the compacted density in Section 7 from 0.001 to 0.01 t/m³. Change the water density values in Table 1 from 4 significant figures to three significant figures.
	Q148	<ul style="list-style-type: none"> Amend preparation requirements in Step 4.4 to include a reference to Test method Q101 Steps 6.2.4 to 6.2.6.
5	Q181C	<ul style="list-style-type: none"> Amend placement conditions in Table 2.
	Q190	WITHDRAWN
6	Q201	<ul style="list-style-type: none"> Change reference to Q103A in Step 5.2.3 a) from Step 6.2 to 6.1.
	Q214	<ul style="list-style-type: none"> Change the rounding of the apparent particle density in Section 7 from 0.001 to 0.01 t/m³. Change the rounding of the particle density on a dry basis in Section 7 from 0.001 to 0.01 t/m³. Change the rounding of the particle density on a saturated surface-dry basis in Section 7 from 0.001 to 0.01 t/m³. Change the rounding of the water absorption in Section 7 from 0.01 to 0.1%.

Part	Test Method	Description of change
	Q214A	<ul style="list-style-type: none"> Change the rounding of the apparent particle density (fine fraction) in Section 7 from 0.001 to 0.01 t/m³. Change the rounding of the particle density on a dry basis (fine fraction) in Section 7 from 0.001 to 0.01 t/m³. Change the rounding of the particle density on a saturated surface-dry basis (fine fraction) in Section 7 from 0.001 to 0.01 t/m³. Change the rounding of the water absorption (fine fraction) in Section 7 from 0.01 to 0.1%. Change the water density values in Table 2 from four significant figures to three significant figures.
	Q214B	<ul style="list-style-type: none"> Change the rounding of the apparent particle density (coarse fraction) in Section 6 from 0.001 to 0.01 t/m³. Change the rounding of the particle density on a dry basis (coarse fraction) in Section 6 from 0.001 to 0.01 t/m³. Change the rounding of the particle density on a saturated surface-dry basis (coarse fraction) in Section 6 from 0.001 to 0.01 t/m³. Change the rounding of the water absorption (coarse fraction) in Section 6 from 0.01 to 0.1%. Change the water density values in Table 1 from four significant figures to three significant figures.
7	Q304B	<ul style="list-style-type: none"> Minor editorial changes. Add new Step 5.17 and remove Note 8.3 to replace the assumed permeability value for low permeability or impermeable specimens and require testing of replacement specimens with lower compaction.
	Q306B	<ul style="list-style-type: none"> Permit the testing of prepared production mix without drying by adding an exception to the method.
	Q306C	<ul style="list-style-type: none"> Amend Step 5.1.6 to refer to mass of silicone in Table 1 as a guide to the mass of sealant required. Amend the title for Table 1 to reflect the change in Step 5.1.6.
	Q306D	<ul style="list-style-type: none"> Minor editorial change to method
	Q307A	<ul style="list-style-type: none"> Permit the use of a larger pycnometer for mixes with a nominal size of 20 mm or greater.
	Q308A	<ul style="list-style-type: none"> Method directly referencing an Australian Standard Test Method, replaced by a full text Test Method. Include an oven in the apparatus in Section 3. Include Step 5.2 for warming the asphalt using an oven. Include a reference to Note 10.6 in Step 5.9.4 which clarifies the process for heating binders where fumes are not evident.
	Q308D	<ul style="list-style-type: none"> Permit the use of ignition furnaces with for example, infrared heating, to be used at lower operating temperatures.
	Q317	<ul style="list-style-type: none"> Method directly referencing either an Australian Standard or Austroads Test Method, replaced by a full text Test Method.
11	Q708B	<ul style="list-style-type: none"> Include reference to Austroads Test Method in Section 1. Remove redundant references from Sections 1. Align definitions in Section 3 with definitions in the Austroads Test Method AG:AM/T001. Include apparatus for calibration of laser displacement transducers in Clause 4.3. Include validation of the system for distance measurement using Austroads Test Method AG:AM/T005 in Subsection 5.2. Include validation of the system for roughness measurement using Austroads Test Method AG:AM/T003 in Subsection 5.2, except that the Roads and Maritime Services loop in New South Wales must be used.

Part	Test Method	Description of change
		<ul style="list-style-type: none"> Replace Subsection 5.3 for equipment validation with a Subsection for Pre-test checks. Include the requirement to check demountable equipment each time it is fitted to a vehicle. Change the method of measurement from the half-car model to quarter-car model to align the method with the Austroads Test Method AG:AM/T001. The changes have been made to Sections 2, 3, 7 and 8. Include a requirement to ensure sudden braking or acceleration of the vehicle is avoided in Step 6.6.3. Change the relationship for converting the IRI results to NAASRA results from half-car model to quarter-car model in Section 7.
	Q708C	<ul style="list-style-type: none"> Include reference to Austroads Test Method in Section 1. Remove redundant references from Sections 1. Align definitions in Section 3 with definitions in the Austroads Test Method AG:AM/T001. Change the method of measurement from the half-car model to quarter-car model to align the method with the Austroads Test Method AG:AM/T001. The changes have been made to Sections 2, 3, 6 and 7. Change the relationship for converting the IRI results to NAASRA results from half-car model to quarter-car model in Section 6. Amend Section 7 to no longer require the reporting of NAASRA results.
	Q708D	<ul style="list-style-type: none"> Include reference to Austroads Test Method in Section 1. Remove redundant references from Sections 1. Align definitions in Section 3 with definitions in the Austroads Test Method AG:AM/T001. Change the relationship for converting the IRI results to NAASRA results from half-car model to quarter-car model in Section 6. Amend Section 7 to no longer require the reporting of NAASRA results.
	Q721	NEW METHOD

Edition 4, Amendment 2 – December 2016

Part	Test Method	Description of change
1	Introduction	<ul style="list-style-type: none"> Add definitions for bulk sample, nominal size, sample, sample increment, sampling location, size fraction, sub-sample, test location and test portion to Table 1. Add references for MRTS06 <i>Reinforced Soil Structures</i>, MRTS09 <i>Plant-mixed Pavement Layers Stabilised using Foamed Bitumen</i> and MRTS35 <i>Recycled Materials for Pavements</i> to Section 3.
4	Q138	<ul style="list-style-type: none"> Amend apparatus requirements to align with new Austroads Test Method. The mould and compaction hammer requirements now comply with the requirements of ASTM D5581 in Section 3.2, Note 8.2 and Table 1. Increase the maximum particle size from 19.0 mm to 37.5 mm in Clause 3.4 and Section 5. Allow the use of a Type A mould for determining the maximum dry density and optimum moisture content in Step 5.1.5. Add Note 8.6 to explain part of the mixing water calculation in Step 6.1.3. Amend Note 8.7 to include comment on monitoring and adjusting the binder loss factor. Amend the suggested compaction portion size in Note 8.11.

Part	Test Method	Description of change
	Q139	<ul style="list-style-type: none"> • Editorial changes to ensure consistency of terminology. • Amend the scope to include a reference to plant mixed foamed bitumen. • Include requirements for preparing samples to be used for plant mixed foamed bitumen stabilisation in Subsection 6.2. • Remove optionality for testing of three day cured modulus in Step 6.3.1. • Include requirements for testing field mixed samples obtained from plant mixed foamed bitumen stabilisation in Subsection 6.4. • Include reference to three, seven and fourteen day modulus and retained modulus testing in Sections 8 and 9. • Include plant mixed reporting requirements to Section 9. • Include requirement to report if the field mixed material is sampled from an in situ mixed or plant mixed in Section 9. • Include requirement to report if the laboratory mixed material is to be used as an in situ mixed or plant mixed material in Section 9.
	Q250	NEW METHOD

Edition 4, Amendment 1 – March 2016

Part	Test Method	Description of change
All		<ul style="list-style-type: none"> • Use standard definitions from Transport and Main Roads Technical Specifications and <i>Materials Testing Manual</i>. • Minor editorial changes to documents. • All Test Methods updated with new Corporate logo header. Blue line in each footer removed.
1	Introduction	<ul style="list-style-type: none"> • Include standard definitions in Section 3 and Table 1. • Table 2 containing equivalent methods revised.
2	Q020	<ul style="list-style-type: none"> • For concrete Test Method Q482 add new Table 2 for k values and add rounding requirements to Table 3. • Add Test Method Q311 to Note 6.1, Table 1 and Table 3. • Amend Sections 2, 3 and 6 to state that Test Methods used in determining the properties of a lot must be the same. • Change the description of the test in Table 3 from relative dry density to relative compaction.
3	Q050	<ul style="list-style-type: none"> • Correct reference to note in Step 9.1.1.
	Q070	<ul style="list-style-type: none"> • NEW METHOD
4	Q101	<ul style="list-style-type: none"> • Add a 9.50 mm sieve to Section 3. • Replace 4.75 mm sieve with 9.50 mm sieve in Step 6.2.3.
	Q102A	<ul style="list-style-type: none"> • Amend Section 1, 3 and 5 to remove requirement for close fitting lids for coarse and medium-grained materials. • Amend Section 6 and add Table 2 to change reporting intervals.
	Q102B	<ul style="list-style-type: none"> • Amend Section 1, 3 and 5 to remove requirement for close fitting lids for coarse and medium-grained materials. • Amend Section 6 and add Table 2 to change reporting intervals.
	Q102D	<ul style="list-style-type: none"> • Amend Section 1, 3 and 5 to remove requirement for close fitting lids for coarse and medium-grained materials. • Amend Section 6 and add Table 2 to change reporting intervals.

Part	Test Method	Description of change
	Q103A	<ul style="list-style-type: none"> • Add calculation and reporting of grading coefficient. • Add 2.00 mm sieve to apparatus. • Add fines ratio, Cu, Cc and grading coefficient to scope. • Add Note 9.1 with reference for grading coefficient.
	Q103F	<ul style="list-style-type: none"> • NEW METHOD
	Q104D	<ul style="list-style-type: none"> • Amend source statement to remove reference to Table 1.
	Q105	<ul style="list-style-type: none"> • Amend Step 4.1 to select oven drying procedure for low plasticity materials. • Amend Step 4.2 to select air drying procedure for medium and high plasticity materials. • Include Table 2 with definitions of low, medium and high plasticity materials.
	Q106	<ul style="list-style-type: none"> • Add Note 8.3. • Remove Note 8.5. • Amend Step 5.1.5 to select oven drying procedure for low plasticity materials. • Amend Step 5.1.6 to select air drying procedure for medium and high plasticity materials. • Amend Steps 5.4.1 c) and 5.4.2 c) to require the scalpel to be used to mark the length of the bar. • Include Table 2 with definitions of low, medium and high plasticity materials.
	Q113A	<ul style="list-style-type: none"> • Amend Step 5.1.5 to specify the use of a minimum curing time from Table 3. This aligns the methods with the latest Australian Standard method. • Remove Note 8.9. • Process for removing water and draining the specimen in Steps 5.4.5 to 5.4.6 has been amended.
	Q113B	<ul style="list-style-type: none"> • Amend Step 5.1.5 to specify the use of a minimum curing time from Table 3. This aligns the methods with the latest Australian Standard method. • Remove Note 8.9. • Process for removing water and draining the specimen in Steps 5.4.5 to 5.4.6 has been amended.
	Q113C	<ul style="list-style-type: none"> • Amend Step 5.1.5 and 5.2.5 to specify the use of a minimum curing time from Table 3. This aligns the methods with the latest Australian Standard method. • Remove Note 8.9. • Process for removing water and draining the specimen in Steps 5.4.5 to 5.4.6 has been amended. • Correct material height gauge dimensions in Note 8.4.2.
	Q115	<ul style="list-style-type: none"> • Change reference to coring method in Step 5.3.1 from Q302A to Q070. • Remove reference to scarifying layers from Step 6.2.5. • Correct references to Notes throughout method.
	Q131B	<ul style="list-style-type: none"> • Remove Step 6.8
	Q135A	<ul style="list-style-type: none"> • Correct references to Notes throughout method. • Add compaction apparatus to Section 3. • Add Table 1 and Note 7.2 for compaction apparatus. • Amend conditioning processes in Section 6 to be specific for lime (2 day mixing process) and other dry additives such as cement, blended cements, lime/flyash and so on.
	Q135B	<ul style="list-style-type: none"> • Correct references to Notes throughout method. • Add requirements for placing soaking weights on CBR specimens during air curing and immersed water curing to Step 4.2.1.

Part	Test Method	Description of change
	Q136	<ul style="list-style-type: none"> Replace nominated working time limit with allowable working time throughout the method. Include definition for allowable working time from Test Method Q140A. Include missing symbol in Step 7.2.1 f).
	Q137	<ul style="list-style-type: none"> Replace various terms such as unbound pavement material with unbound material throughout the method. Amend Step 5.5 to change the degree of saturation limit from greater than 2.0% to greater than 4.0%. Remove the requirement to sample a moisture content after testing in Step 6.2.4.
	Q138	<ul style="list-style-type: none"> Replace 30-60 minute delay period in the foaming and mixing process in Subsection 7.2 with 45 minute conditioning period. This aligns the process and terminology with Test Method Q135A. Add requirement for C170 bitumen to be free of cutter, flux and other additives. Amend apparatus definition for an extrusion jack in Clause 3.2.4.
	Q139	<ul style="list-style-type: none"> Change reference to coring method in Step 6.3.1 from Q302A to Q070.
	Q140A	<ul style="list-style-type: none"> Use standard definitions for materials in Step 4.1.3 from the Introduction to this manual and Transport and Main Roads Technical Specifications.
	Q141B	<ul style="list-style-type: none"> Add crushed rock and stabilised materials to the scope of the method. Amend particle size criteria and test hole depths in Table 1.
	Q142A	<ul style="list-style-type: none"> Replace a reference to a 19.0 mm sieve in the scope to a 37.5 mm sieve.
	Q142B	<ul style="list-style-type: none"> Replace a reference to a 19.0 mm sieve in the scope to a 37.5 mm sieve.
	Q142C	<ul style="list-style-type: none"> Replace a reference to a 19.0 mm sieve in the scope to a 37.5 mm sieve.
	Q144A	<ul style="list-style-type: none"> Use standard definitions for materials in the Scope and Sections 3 and 5 from the Introduction to this manual and Transport and Main Roads Technical Specifications.
	Q146	<ul style="list-style-type: none"> Use standard definitions for materials in the Scope, Section 3 and Notes from the Introduction to this manual and Transport and Main Roads Technical Specifications.
6	Q201	<ul style="list-style-type: none"> Amend method to allow the use of fractions obtained from particle size distribution method AS 1141.11.1. Correct reference to Q103A in Step 5.2.3.
	Q214	NEW METHOD
	Q229A	<ul style="list-style-type: none"> Remove requirement for constant temperature environment in Section 3 and Step 6.3. Amend Step 6.3 to require storing of test portion and water in the abrasion jar in a room at 23°C ± 3°C before testing.
	Q229B	<ul style="list-style-type: none"> Remove requirement for constant temperature environment in Section 3 and Step 6.3. Amend Step 6.3 to require storing of test portion and water in the abrasion jar in a room at 23°C ± 3°C before testing.
	Q230	NEW METHOD
7	Q301	<ul style="list-style-type: none"> Method amended to directly reference an Australian Standard Test Method.
	Q302A	<ul style="list-style-type: none"> Method amended to directly reference an Australian Standard Test Method.
	Q302B	<ul style="list-style-type: none"> Method amended to directly reference an Australian Standard Test Method.
	Q303A	<ul style="list-style-type: none"> Amend Note 5.1 to clarify the requirements for air drying of core samples.
	Q305	<ul style="list-style-type: none"> Remove reference to hammer face from hotplate requirement in Clause 3.9. Remove reference to hammer face from Step 5.4.

Part	Test Method	Description of change
		<ul style="list-style-type: none"> Amend Steps 5.11 and 5.13 to remove requirement for 50 hammer blows and replace with reference to a specified number of blows. Amend Steps 6.4, 6.5 and Note 9.14 to require the immersion of breaking head segments in water where practicable. Add requirement to report number of blows applied to each face of the test specimens to Section 8. Amend Note 9.10 to require the application of 50 blows to the face of each specimen if a number is not specified.
	Q306A	<ul style="list-style-type: none"> Clarify the use of air drying in Step 5.1.2 and Note 8.2. Amend rounding of known density of paraffin wax to 0.001 t/m³ in Clause 4.1.
	Q306B	<ul style="list-style-type: none"> Method amended to directly reference an Australian Standard Test Method.
	Q306C	<ul style="list-style-type: none"> Clarify the use of air drying in Step 5.1.2 and Note 8.2. Amend rounding of known density of paraffin wax to 0.001 t/m³ in Clause 4.1.
	Q306D	<ul style="list-style-type: none"> Method amended to directly reference an Australian Standard Test Method.
	Q307A	<ul style="list-style-type: none"> Method amended to directly reference an Australian Standard Test Method.
	Q308A	<ul style="list-style-type: none"> Method amended to directly reference an Australian Standard Test Method.
	Q308D	<ul style="list-style-type: none"> Method amended to directly reference an Austroads Test Method.
	Q311	<ul style="list-style-type: none"> Add Test Method Q306D and Q306E to Step 3.1. Include calculation and reporting of minimum and maximum characteristic percentage by volume of air voids in Sections 4 and 5. Amend the binder absorption calculations in Note 6.3.
	Q315	<ul style="list-style-type: none"> Amend Clause 3.1 to allow the sampling of both laboratory mix or plant produced mix. Allow compacted density to be determined using Test Method Q306B by amending Step 5.6 and adding Note 8.1. Amend the calculation in Step 6.2 to calculate a tensile strength in kPa. Amend Step 6.3 to round the average tensile strength to the nearest 10 kPa. Change the average tensile strength units to units to kPa in Step 6.4. Amend the rounding of reported results in Step 7.3 and 7.4. Amend Section 7 to allow the reporting of tensile strength in kPa.
	Q317	<ul style="list-style-type: none"> Method amended to directly reference an Australian Standard or Austroads Test Method.
	Q320	<ul style="list-style-type: none"> Amend 3.1.2 to align the requirements of the wheel tracker table with the current Austroads method.
	Q321	<ul style="list-style-type: none"> Amend the binder absorption calculations in Note 6.2.
	Q322	<ul style="list-style-type: none"> Amend the apparatus specifications and working tolerances in Table 1.
	Q324	<ul style="list-style-type: none"> NEW METHOD
	Q325	<ul style="list-style-type: none"> NEW METHOD
9	Q456	<ul style="list-style-type: none"> Amend Note 10.5.
	Q473	<ul style="list-style-type: none"> Amend method to include testing of moulded specimens.
	Q477	<ul style="list-style-type: none"> Amend the foreign materials definitions in Table 2.
	Q482	<ul style="list-style-type: none"> NEW METHOD

	Q134	<ul style="list-style-type: none"> The calculations for determining the relationship between stabilizing agent content and temperature rise have been included in Section 7. The calculations of determining the calibration constants have been included in Section 7. The calculation of test data revised to allow for the use of a simpler format of the calibration relationship. The reporting requirements in Section 8 have been amended to report the new calibration relationship determined in Section 7. A requirement to check the temperature difference between the test portion and buffer solution has been added in Step 6.6 and Note 9.4 and 9.6. The allowable temperature difference is the same as the similar Australian Standard method. Requirements for the test environment have been relaxed in Steps 5.1.4 and included in Notes 9.3 and 9.4. Techniques for warming or cooling the test portion have been included in Note 9.6. Amend Section 8 to remove reporting requirements already specified in sampling methods, NATA requirements or that are no longer required.
	Q136	<ul style="list-style-type: none"> Insert Table 1 and remove references to Table 2.
4	Q137	<ul style="list-style-type: none"> Amend Section 8 to remove reporting requirements already specified in sampling methods, NATA requirements or that are no longer required.

Part	Test Method	Description of change
	Q138	<ul style="list-style-type: none"> • Replace references to 37.5 mm sieve with 19.0 mm sieve in Sections 2, 3 and 5. • Amend Step 5.1.5 to require the use of a Type A mould for compaction testing. • Add a moisture adjustment for dry stabilized agent in Step 6.1.3. • Change the calculation for foaming agent to a mass required rather than volume. • Amend the foaming process in Subsection 7.1. • Add a 30-60 minute delay or dwell period into the foaming and mixing process in Subsection 7.2.
	Q139	<ul style="list-style-type: none"> • Amend the vacuum requirement in Subsections 6.1 and 6.2 and add Note 10.2 to assist consistent interpretation of this requirement. • Amend the preparation requirements for laboratory, field and core samples in Section 6. • Add calculation and reporting of average modulus values in Sections 8 and 9. • Change reporting requirements in Section to reflect changes in Section 6, 8 and 9.
	Q140A	<ul style="list-style-type: none"> • Include the calculation of characteristic values of a lot by referencing Test Method Q020 in Section 5. • Include the reporting of characteristic values of a lot by referencing Test Method Q020 in Section 6. • Method amended to reflect a change in sampling for determination of oversize percentage and density. These samples are now taken from the material obtained for moisture density relationship testing (Q142A, Q142B or Q142C).
	Q140B	<ul style="list-style-type: none"> • WITHDRAWN
	Q141B	<ul style="list-style-type: none"> • Amend Section 11 to remove reporting requirements already specified in sampling methods, NATA requirements or that are no longer required. • Method amended to reflect a change in sampling for determination of oversize percentage and density. These samples are now taken from the material obtained for moisture density relationship testing (Q142A, Q142B or Q142C). Determination of oversize content in Subsection 9.5 and reporting of oversize percentage and density in Section 11 have been removed.
	Q142A	<ul style="list-style-type: none"> • Some additional information required for reports has been removed from Section 7. • Include reporting of sieve used to determine percentage oversize in Section 7. • Method amended to reflect a change in sampling for determination of oversize percentage and density. These samples are now taken from the material obtained for moisture density relationship testing. Subsections 5.3 to 5.7 and Section 7 have been amended to allow for the determination and reporting of oversize percentage and density. • Amend Step 5.7.2 to only prepare portions where the stabilizing agent is incorporated in the laboratory. Add Step 5.7.3 for portions prepared from samples where the stabilizing agent was incorporated insitu.
	Q142B	<ul style="list-style-type: none"> • Some additional information required for reports has been removed from Section 7. • Include reporting of sieve used to determine percentage oversize in Section 7. • Method amended to reflect a change in sampling for determination of oversize percentage and density. These samples are now taken from the material obtained for moisture density relationship testing. Subsections 5.3 to 5.7 and Section 7 have been amended to allow for the determination and reporting of oversize percentage and density. • Amend Step 5.7.2 to only prepare portions where the stabilizing agent is incorporated in the laboratory. Add Step 5.7.3 for portions prepared from samples where the stabilizing agent was incorporated insitu.
