Logan and Gold Coast Faster Rail

Jointly funded by the Australian and Queensland governments, the Logan and Gold Coast Faster Rail (LGC) project will meet the growing travel demand between Brisbane and the Gold Coast. Here's what's been happening on the project.

Key delivery benefits

- Improved accessibility at stations
- Increased rail network capacity by doubling the tracks
- Improved safety by removing level crossings
- Safer and easier to walk and cycle to stations

That's a wrap

The latest round of community engagement on the updated station precinct designs has now wrapped up. Engagement for the Holmview station precinct ended in early October, marking an important milestone in the project's planning process.

Thank you to everyone who took the time to participate and share their feedback. Your insights and local knowledge are helping to refine the precincts design and ensure the project delivers benefits that reflect local needs and priorities.

Engagement summaries for our final station precincts are currently being prepared and will be available soon.

LGC ARG, project team, and TMR Accessible Transport Network representatives at Yeronga station

Inclusive and accessible stations matter

The LGC Accessibility Reference Group (ARG) is helping us deliver stations that make it easier for more people to access public transport. Through a co-design process, members share feedback based on their lived experiences, helping to shape more inclusive stations with improved functionality.

We recently hosted members on a tour of Yeronga station to identify what works well, where barriers remain and where there are opportunities to improve. Members provided feedback on elements ranging from wayfinding and lifts to amenities and customer information. Their insights will inform the design of LGC's future station upgrades.

Indicative location for new fauna warning signs on Acacia Road, Woodridge

Focusing on the environment

Comprised of several environmental groups, Logan City Council (LCC), Brisbane City Council (BCC) along with community and academic representatives, the LGC Environmental Reference Group (ERG) is already helping deliver positive environmental outcomes, through a range of practical initiatives, including:

- working with LCC, BCC and community environment groups to provide excess mulch for local restoration and revegetation projects
- sharing local knowledge about suitable native plant species, to support revegetation to be undertaken along creek lines
- working with BCC to install new, permanent fauna warning signs and pavement markings on Acacia Road, Woodridge, to help alert drivers to potential native animal crossings, reducing collisions and protecting wildlife.

The LGC ERG will continue to provide inputs into planning for further local initiatives to protect and enhance the local environment.

Corridor widening works south of Edens Landing station

Works are ramping up across the corridor

Delivery is gathering pace, with enabling works underway at most locations across the project corridor. 'Enabling works' prepare the site for construction activities, which will follow shortly after.

Design activities will continue over several years for the track, civil, structural, systems and signalling works required along the 20km project corridor.

Next steps (early 2027)

- Rail package – work will continue along the length of the corridor from Kuraby to Beenleigh. Construction will start at Kingston and Edens Landing.
- Open Level Crossing Removal – ongoing bridge construction and utility relocations at Kuraby.
- Loganlea Station Relocation – ongoing construction of platform two, the park 'n' ride and installation of final section of pedestrian footbridge.

LEGEND

Duplicated tracks | Road network | Station upgrade | Station relocation | Straightened section of track | Existing corridor to be re-purposed | Level crossing removal

Kuraby

Open Level Crossing Removal (OLCR)

In construction
- Utilities works
- Local intersection upgrades
- Ongoing road-over-rail bridge construction.

Rail package enabling works
- Site investigtions
- Utilities works.

Trinder Park

Enabling works
- Site investigtions
- Utilities works.

Woodridge

Enabling works
- Site investigtions
- Utilities works.

Kingston

Enabling works
- Utilities and overhead line works
- Noise wall removals.

Loganlea

Loganlea Station Relocation (LSR)

In construction
- Over 70% complete
- Ongoing road works on Valencia Street and Kraatz Avenue
- Ongoing station and park 'n' ride works.

Rail package enabling works
- Utilities works
- Local road changes.

Bethania

Enabling works
- Site set-up
- Ground investigations and utilities works
- Vegetation clearing
- Demolition.

Edens Landing

Enabling works
- Site set-up
- Earthworks
- Vegetation clearing
- Overhead line works.

Holmview

Enabling works
- Site investigtions
- Utilities works.

Beenleigh

Enabling works
- Site investigtions
- Utilities works.

GOLD COAST

Students from Emmaus College Jimboomba onsite in Kuraby

Making tracks into the construction industry

Senior students from local schools recently visited our project sites at Loganlea and Kuraby to experience major infrastructure projects firsthand.

Students from Loganlea State High School completed a five-week work experience program with the LSR project, gaining practical experience across administration, health and safety, environment, civil construction and communication. Meanwhile, students from Emmaus College in Jimboomba visited the Kuraby project to learn more about the range of career pathways available in infrastructure.

Together with our project partners, the ActivUs Alliance, Bielby Hull Joint Venture, Construction Skills Queensland and local schools, we're helping students discover what it takes to deliver essential transport infrastructure and explore potential careers.

Track closures

There will be major track closures and travel changes in January 2027 as we build a better rail network. Plan your journey in advance by **downloading the Translink app, visiting translink.com.au or calling 13 12 30**.
